CUSTOM SOLENOIDS

Linear Motions Company specializes in CUSTOM D.C. and Rectified A.C. Solenoids. The solenoids illustrated are a sampling of solenoids that have been designed for specific applications. It is not necessary to sift through numerous catalogs to find a solenoid that might fit your design; send us your specifications and we will design a solenoid to fit your application or send us your obsolete or unknown solenoid and we will reproduce it.

DESIGN FEATURES AVAILABLE

- Plunger return spring
- Pull, Push or Push-Pull actuation
- Long Stroke (5 inches & up)
- Choice of Leadwires, Quick disconnect, Screw type and Solder Terminals
- Built-in or external full wave rectifier
- Optional solid state Solenoid Driver—FULL Pull-in/REDUCED Holding Voltage
- Save assembly cost with unassembled solenoid components (i.e. built-into your enclosure)

GENERAL DESCRIPTION

The SOLID STATE VOLTAGE CONTROLLED SOLENOID SYSTEM is a new innovation in high performance Continuous Duty Solenoids. The Solid State Voltage Control Unit is a variable duty cycle solid state device, there are no power robbing resistors to produce heat and no mechanical components to wear out. An Intermittant Duty solenoid is used in conjunction with the Voltage Control Unit.

- Virtually burn-out-proof—switching is independent of plunger movement
- Higher reliability
- Longer life—solid state switching; no moving parts
- Smaller solenoid—no holding coil, switches, insulators, etc. are required
- Versatile—since there is no mechanic connection between the plunger and the switching device, any type of solenoid can be used (i.e. Pull, Push, Push-Pull).
- Control unit can be mounted anywhere

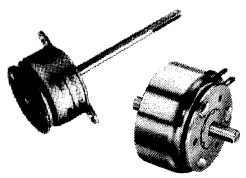
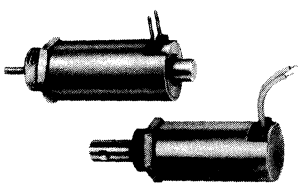
Lucas Ledex

Solenoids

Over 400 choices of standard solenoid designs are available off-the-shelf from us. But, if none of these meet your unique requirements, we'll provide you with custom engineered prototypes. Either way, Lucas Ledex Inc. offers you the widest variety of solenoids for your design.

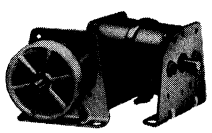


Rotary Solenoids
Step-turn-index-lock-punch-lift. For millisecond-fast torque and endurance, specify a Lucas Ledex rotary solenoid. Nine basic sizes, right or lefthand strokes from 10 to 110 degrees. Torque output to 117 pound-inches. Life of over 100 million cycles with endurance engineered models. Four standard size groups of Magton rotary solenoids produce high torque with no axial displacement. Standard angular strokes: 60°, 45°, and 30°, either CW or CCW. Can be modified. Long operating life: 500 million cycles. Request literature.

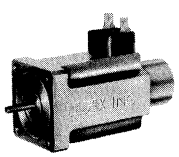


Linear Solenoids
Short-medium-long strokes are all available from one source—Lucas Ledex Inc. Choose our low profit flat face push/pull for high force/short stroke; our low profile conical face push/pull for medium force/stroke and our tubular solenoids for long strokes. New Series 20 tubular pull solenoids provide 100 million actuations (push, 50 million), quiet operation, push or pull, and economy—from stock. Rugged construction provides accurate repeatability after long usage. Our tubular solenoids have built-in impact cushions to absorb energy at the end of the stroke and electroless nickel plated plungers for longer life.

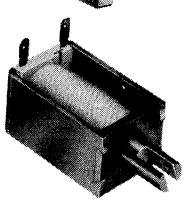
Magnetic Latching Solenoids
Magnetic latching solenoids use permanent magnets coupled with conventional rotary, tubular, low profile, or open frame solenoids, to hold the unit's plunger in an open or closed position without current drain. A momentary pulse releases the latch. Memory is retained during power loss. Request literature.



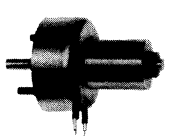
Stepping Solenoids
Step 10-15-20 or 30 degrees with the highest torque a stepping solenoid makes—the Series 50-L. Square wave pulse drives either the unidirectional or bidirectional model for 10,000,000 steps with a non-accumulative accuracy of ± 1°. Direct couple for mechanical ease and avoid linkages. Can be manually overridden in case of power failure.



Proportional Solenoids
Open loop/closed loop, variable position sensing is now possible by using our proportional solenoid with our controller for smooth, accurate response. Hydraulic systems can use our wet plunger type which requires no dynamic seals and provides up to 50 pounds force. Do away with pilot stages and expensive servo valves.



Open Frame Solenoids
TDS Series open frame solenoids for large volume OEM applications are available at competitive prices in 34 standard configurations, manufactured in Japan. Lucas Ledex D-Frame solenoids are dependable and reliable. Eight standard models are available from stock with strokes up to 1.25". Quick connect terminals and class "B" coils are standard. Request literature.



Soft Shift® and Custom Designed Solenoids
Soft Shift Solenoids give variable speed control, from snap action to quiet variability. Variable positioning with electronic control.

Typical custom designed solenoids include dot matrix and printhammer models.

Low profile push/pull, flat face, or conical solenoids are built for high force to size, and fast response.

Soft Shift® solenoids—capable of proportional control as well as on-off.

Stepping solenoids—highest torque solenoid available. Extended life up to 10 million cycles minimum on unidirectional models or each direction on bidirectional models.

Open frame solenoids—34 models of TDS Series and 8 models of our D-frame Series solenoids offer economical long term service.

Magnetic latching solenoids—all solenoid configurations maintain energized position without current draw.

Pushbutton switches—All models stocked. Individual pushbuttons, flat panel pushbuttons, low profile rotary, binary selector, keyboard, and keylock switches. Ganged and panel mounted switches with the look and feel of quality.

Rotary manual switches provide economy by simplifying circuitry, eliminating auxiliary circuit components and minimizing wiring. Reliable for military and commercial uses.

Stepping switches operate in −55°C to +80°C and switch 1A @ 120 VAC or 2A @ 28 VDC. More switching—less space.

Packaged switches handle high density transfer switching without relays in extreme environments. Meet relevant MIL specs.

The Series 20 offers the economical solution to your long life actuating needs. A low friction bobbin assembly provides for a life expectancy of millions of actuations. The problem of powdered metal flaking is eliminated through the metal-to-plastic bearing surface construction. The terminal version mates with standard connectors. A special mounting nut is supplied, packed loose.

The Series 20 is ideal for applications where field servicing is prohibitive. Its quietness and high reliability provides definite advantages in applications involving peripheral equipment, business machine mechanisms, door inter-locks, interposers, and gate releases. Request literature.

Switch Seals

An elastomeric boot which seals, thus protecting a switch and internal components against hazardous foreign elements. AME's one piece switch seal is constructed of a flexible rubber boot element bonded during molding to a threaded metal insert that fully encapsulates the switch and bushing to the panel.

This assembly replaces the panel mounting nut and seals the mounting hole making it watertight. It protects against moisture, oil, dirt, dust, most solvents, many acids (see elastomer selection guide).

Switch seals provide vibration resistant mounting and act as double insulation with no interference to switch movement.

CAST URETHANE & SILICONE

AME supplies cast urethane and silicone products precision engineered to meet your most demanding requirements.

If you need high tensile/tear strength, excellent resistance to abrasion and high impact capability, our cast urethane is ideally suited for the job. Superb temperature resistance to the damaging sub-zero cold or searing heat extremes is found in the cast silicone custom engineered by AME Corporation.

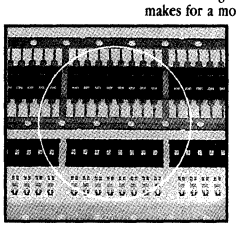
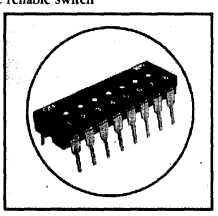
SWITCH SEALS

THE WORLD'S SMALLEST SURFACE MOUNT DIP SWITCH!

American Research & Engineering's strip molding process makes for a more reliable switch





It's More Reliable

Three simple components: two composite metal/plastic strips and one plastic molded cover replaces a 25 piece assembly to make a switch that's more reliable because it's more consistent.

SAME SIZE AS AN IC!

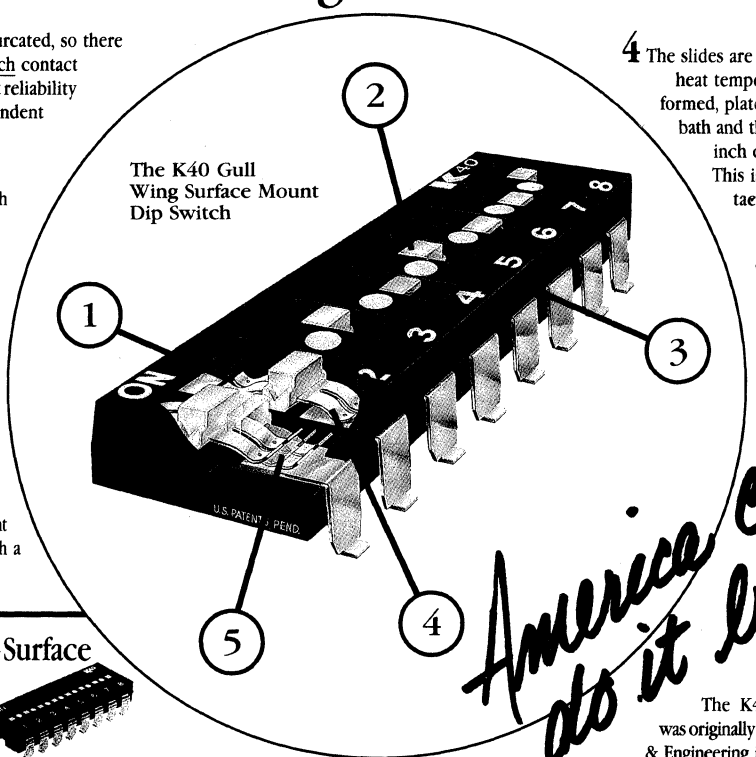
If you don't have automatic insertion equipment, we're banking that some day you will. In the meantime, your board will look neater, better and more professional. And if you have insertion equipment, you'll save the cost of hand insertion!

Three New Patent Designs That Use 40% Less Parts

1 The slides are split, or bifurcated, so there are two separate slides for each contact point. This doubles the contact reliability because you have two independent gold plated contacts at each switch point.

2 The switches are flush with the cover to eliminate accidental, on-off movement once the DIP is programmed. Simple.

3 The package is sealed. The lead frame is molded directly into the housing to provide a one piece, no-leak construction. The cover is ultrasonically molded to the frame after the switch is assembled. There is no better construction. The Surface Mount housing is made of Ryton with a Kapton tape seal.

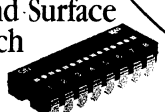


4 The slides are made from beryllium copper, heat tempered to a full hardness, spring formed, plated in a 100 micro inch nickel bath and then spot gold plated 30 micro inch deep at all the contact points. This is the best proven switch contaet surface that money can buy.

5 Every one of the switch contact surfaces on the main lead frame are plated with 30 micro inch of gold over 100 micro inch of nickel.

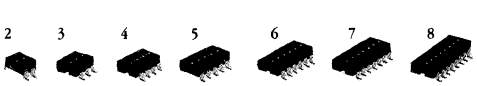
America can do it better!

The K40 "J" Bend Surface Mount Dip Switch



Also available for the design engineer trying to save every microinch of board real estate is the K40 "J" bend Surface Mount DIP Switch in positions two through eight.

All K40 Dip Switches Are Available In Positions Two Thru Eight!



The K40 Standard Pin Dip Switch

The K40 standard pin DIP Switch was originally designed by American Research & Engineering in 1982 as the world's smallest DIP Switch. It was with its incredible small size and durability that the K40 standard pin DIP Switch led to the development of the new K40 Surface Mount DIP Switch lineup. Lead time for the K40 standard pin DIP Switch is seven to fourteen days and fourteen to twenty-one days for the K40 Gullwing or "J" bend DIP Switch. All K40 switches are manufactured at our plant in Elgin, Illinois.

A range of single and multi-pole miniature and sub-miniature Micro Switches with mechanisms totally enclosed to the standard indicated by IEC Code EP67 and NEMA Type 6. Efficient sealing is proved by a pressure test. Explosion-proof models are included in the range. Single-pole switches have plunger actuators which may be used alone or with plain lever or roller-lever auxiliary actuators. Multi-pole models are available with either plunger or integral level actuators (plain or with roller). With one exception, all models are supplied with factory fitted, PVC insulated wires.

SINGLE POLE SUB-MINIATURE SWITCHES V4S MODELS

Glass-loaded nylon case and lid; acetal plunger; a neoprene cowl is fitted around the plunger and bonded to the lid. The well-proven Burgess V4 changeover mechanism is fitted within the enclosure. Three 16/0.2 mm p.v.c. insulated wires are potted in position. Silver contacts are standard. Temperature range – 10° to + 70°C and recommended maximum rating 3 amperes, 125/250 VAC. Silicone cowl/lead versions available for – 50°C operations.

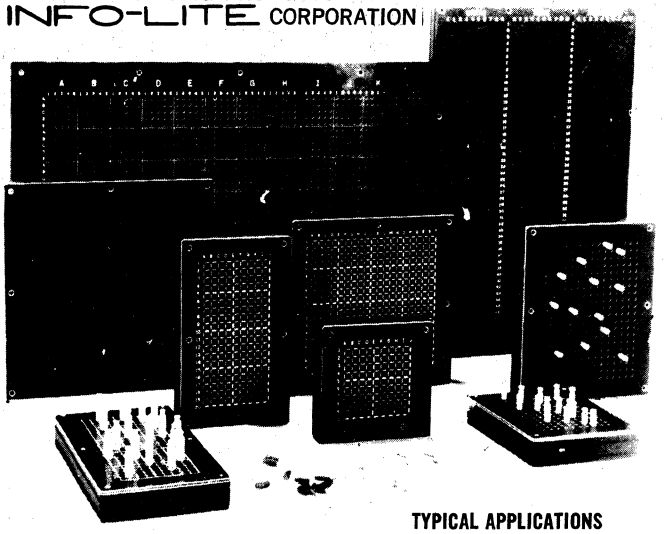
THE PROGRAMMING PRODUCTS DIVISION OF
INFO-LITE CORPORATION

PROGRAMMING PRODUCTS

MATRIX PINBOARDS



INFO-LITE has developed a most convenient, compact and economical system for reliable programming and switching • The Matrix Program Board allows a wide variety of switching/programming functions to be performed by simply inserting programming pins (shorting or diode type) into a 2 to 10 deck contact matrix • No accessories such as "read" "write" equipment are required • Matrix Board features have led them to be favored over such devices as patchboards, card readers, toggle and thumbwheel switches, mag/punched tape and electronic memories • The two basic uses for Matrix Program Boards are: (1) Cordless patching (input-output switching), using shorting pins; (2) Programmable diode matrices (logic memories), using diode pins • Units with up to 100 x 100 crosspoints can be supplied to meet your requirements, whether for prototype or production quantities.

See Data Sheet MB3 for detailed specifications.

FEATURES

- Reliable closed entry contacts
- Rugged programming pins that will not bind
- Rapid and convenient method of programming/switching
- Permits insertion of components into network without soldering
- Replaces costly complex switching hardware
- Attractive and compact package
- Low capacitance for high frequency applications
- Ease of visual program checking

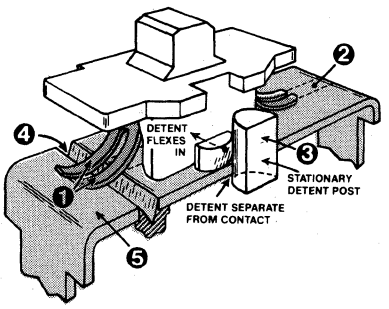
Switch reliability that is the best ever!



1. Redundant gold contacts dramatically enhance contact reliability.
2. Positive wiping contacts assure low and consistent contact resistance. (.050″ travel)
3. Detent function separated from contacts to optimize both designs.
4. Gold contacts never abraded or contaminated by sliding over polymer surfaces. Contacts never touch a nongold surface.
5. No contactor deflection for the life of the switch. Constant contact force eliminates overstressing of contacts for greater reliability.

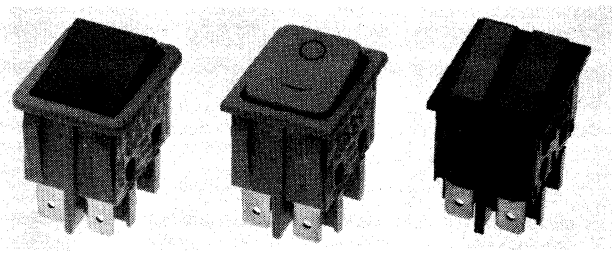
Dreefs

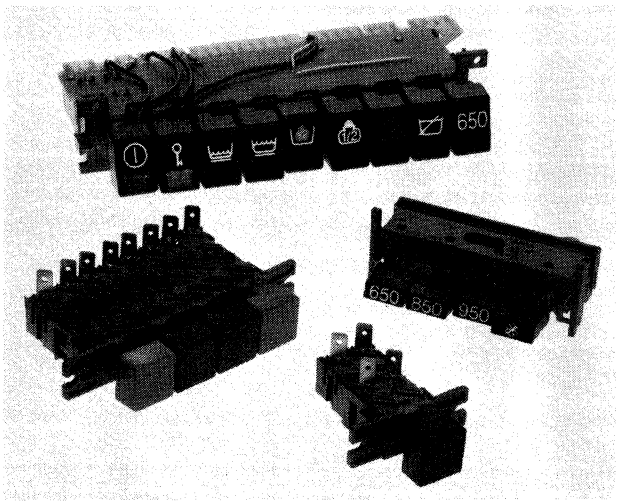
The Worldwide Choice

Rocker Switches



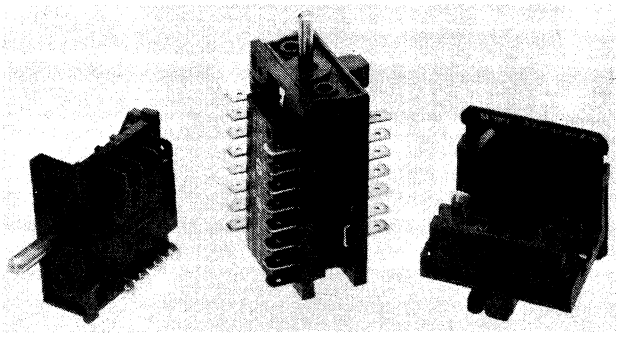
The Dreefs line of power rocker switches ranges from subminiature to full size. Shown above are a few configurations standard within the Dreefs 2WiXII Series. Rated at 16 (4) amperes @250 VAC INDUCTIVE, or 25 amperes @125 VAC INDUCTIVE, this series features an inrush capability of up to 125 amperes (typical). A wide variety of bezel styles and colors, along with many choices for standard and customized rockers (illuminated or non-illuminated) are available.

Pushbuttons

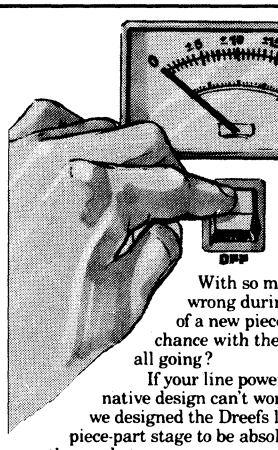


The unique terminal arrangement and building block technique used in the design of these pushbuttons allows easy accommodation of special switching requirements. Each terminal station along the standard heavy-duty thermoplastic housing contains its own set of double contacts, for high reliability and great versatility in switching applications. Each terminal station is rated at up to 16 amperes @125/250VAC. Solid silver, AgCd0 or Au contacts are standard. Operation is momentary, push-push, interlock or cancelling action.

In-Line, Cam Actuated Switch System



The camshaft technique of rotary-to-linear conversion to open spring-loaded NC contacts provides the crisp action, reliability and weld-breaking advantages of make/break contacts, along with high inrush and high current-carrying capabilities. Up to 26 separate SPST switches, each controlling an individual circuit, may be actuated along a single cam, with one to 26 rotational positions. Contacts are rated at 16 amperes @125/250 VAC. High-inrush or dry circuit contacts are available.



What *happened?*

With so many other things that can go wrong during the design and development of a new piece of equipment, why take a chance with the one component that gets it all going?

If your line power switch fails, the most imaginative design can't work! With that thought in mind, we designed the Dreefs line of Power Rockers from the piece-part stage to be absolutely the **BEST** available on the market.

All switches carry a wide array of international approvals, including **VDE, UL** and **CSA.**

Electrical and mechanical specifications are fully described in a newly updated catalog. A telephone call or a note from you will get one into your hands quickly.

By the way, the *outside* of these switches are designed to make your control panel look great too. After the hard part gets done, that's a nice plus.

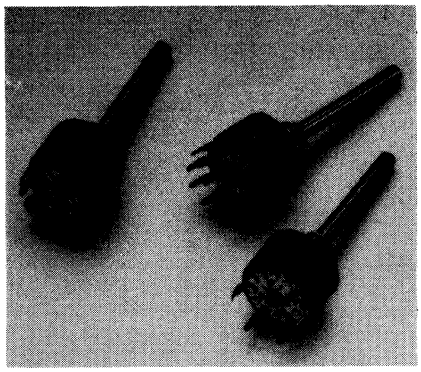
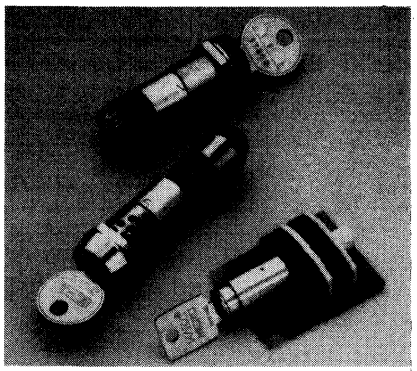
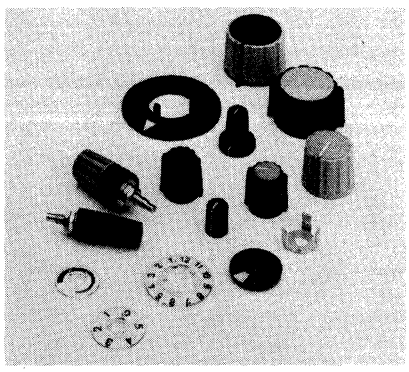
ELMA—Experience and precision for every High Quality switch application



TYPE 01



TYPE 01 AND 06 KEYLOCK



COLLET KNOBS

All **ELMA** switches are designed and manufactured to ensure high reliability and long life. They are in keeping with the strict standards required in medical technology and communications. Common areas of application include process and manufacturing control, measuring and monitoring equipment.

ELMA switches are available in the following forms:

—a broad standard range of rotary switches of different sizes with solder lug terminals or for PCB mounting

—Binary coded rotary switches for PCB mounting

—Binary coded rotary switches for PCB mounting with mounting dimensions according to IC 297/ DIN 41494 standards.

ELMA switches are mainly used in industrial electronics and are especially suitable for switching medium loads, logic levels and dry circuits.

Consequently they are offered with a choice of contact material—gold flashed silver and 3 or 5 μm hard gold. These materials plus the design of the contact ensure high and constant electrical conductivity and good resistance to corrosion and abrasion.

The **ELMA** rotary, PCB, code and key switches are guaranteed to be of the finest quality and to exhibit high reliability and repeatability over many years—this is what has earned us our world wide reputation for excellence.

Notes:

1. Response speed depends on the damping fluid used, and is related to jitter reduction. Rated on a scale of 0 to 5, with 5 being heavily damped (longest response time).
2. Switches with other dampening factors are available. Consult factory.
3. Jitter is tendency for switch to change state 3° from operational point. Ranked on a scale of 0 to 5, with 5 being very susceptible to vibrations.
4. Values shown are for switch viewed so that pins are side by side. For values with pins in line (one behind the other) ask for product data sheet.

GORDOS

MERCURY TILT SWITCHES

MERCURY SWITCH CHARACTERISTICS

FOR MANY APPLICATIONS preference is given to a mercury switch over comparable mechanical switches for specific reasons. Contacts are sealed in protected atmosphere and can be observed; no contact bounce; high amperage can be switched with low operating force; convenient overtravel, horizontal reference. Mercury switches are quiet operating, reliable and often lower in cost.

CONSTRUCTION

Electrodes are hermetically sealed in a glass envelope containing high purity mercury. When switch is tilted, only the mercury moves, making or breaking the circuit.

DIFFERENTIAL ANGLE

Differential angle in an SPST switch is the angle through which the switch must be tilted to cause the mercury to move from the just-make position to the just-break position.

INSTALLATION

The most common installation method for mercury switches is a simple spring clip, either riveted, welded or attached with screws to the mounting surface. The recommended mounting clip for each switch is listed in the specification charts and must be ordered separately.

TEMPERATURE

Switch operating temperature is limited by mercury's freezing point of −38°C. The upper temperature limit depends primarily on the characteristics of the lead wire or insulating materials, generally approaching +300°F (+149°C).

LEAD TERMINATION

With the exception of the HG 457 LO, leads are dumet and can be soldered or welded. To order solder-dipped leads, add the suffix "S" to the part number. The HG 457 LO has tungsten leads.

Products and specifications subject to change without notice.

***Mercury to Wetted Metal (MWM)**—The contact surface of the electrode is coated with a permanent adherent film of mercury to provide a low, stable resistance for low energy circuits and improve the current-carrying capacity for higher-load applications. The wetted contact provides a snap-action which reduces arcing, stabilizes the differential angle, and offers excellent contact resistance.

***Mercury to Dry Metal (MDM)** — The mercury pool makes direct contact with the electrode base metal or welded-on tip. This contact design, the most common in mercury switches, is incorporated in switches with moderate-to-small current ratings. It is not recommended for low energy circuits.

Gordos manufactures a wide variety of Mercury Tilt Switches.

Consult factory for a configuration to meet your particular requirements.

GENERAL SPECIFICATIONS

(Applicable to this page and previous one.)

Failure criteria are as follows: contact resistance is 100 milliohms; insulation resistance is 1,000 megohms; and dielectric strength is 500 Vac. Environmental specifications are tested to MIL-STD-202F per MIL-S-83504.

Switches passed the following tests: vibration (10-2,000 Hz at 15G); shock (50G, 11 milliseconds half sine); moisture resistance (240 hours with temperature cycling and polarization); thermal shock; and thermal aging (1,000 hours).

Machine soldering requires switches be top sealed. Sealed recessed rocker switches were successfully tested per EIA Standard RS-448-2 for machine soldering. Similar performance can be expected from sealed switches wtih other means of actuation. Tests include the following: fluxing with flux touching switch body; immersion (therefore suitable for spray and vapor/spray cleaning); and the 2, 4, and 6 second soldering time. Acceptable cleaning solutions are 1-1-1 trichlorethane, Freon (TF, TE, or TMS). Acetone, methylene chloride, and Freon TMC are not recommended.

Housings and actuators are polyester: UL94V-O rating. Potting (except Series 90) is epoxy. Top seal (except Series 90) is polyester film. Terminals (except Series 78SS) are brass, solder plated 100 microinches minimum over copper/nickel barrier. Shorting member (except Series 78SS) is brass, gold plated 10 microinches minimum over nickel plate. See individual series for materials not shown here.

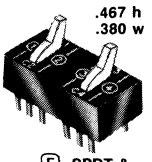
Ⓓ SPDT & DPDT



Ⓔ SPDT & DPDT

2 POLE, 3 POLE, AND 4 POLE, SINGLE THROW SLIDE SWITCHES (FIG. A)

Rated for 10,000 operations to make and break the following loads: 1 mA, 5 Vdc; or 50 to 150 mA, 30 Vdc. Base contacts are copper alloy, gold plated 10 microinches minimum over nickel plate.

SPDT AND DPDT SLIDE SWITCHES WITH SEPARATE CIRCUITS (FIG. B)

Rating and materials are the same as the switches in Figure A. In Single Pole/Double Throw switches, each slide operates two adjacent separate circuits, opening one of them, while closing the other. (In Double Pole/Double Throw switches, 1 slide switches 4 circuits at once, opening circuits 1 and 3, while closing 2 and 4, etc.). This circuitry, used in telephone switching systems, makes these switches form, fit, and function equivalents. For true SPDT (DPDT) circuitry, adjacent terminal pairs may be tied with a printed circuit. Dot on the cover indicates the closed position of individual terminal pairs.

SPDT AND DPDT ROCKER AND TOGGLE SWITCHES WITH COMMON POLES (FIG. C, D, E)

Rated to make and break 50 mA, 30 Vdc for 35,000 operations, and 125 mA. 30 Vdc for 25,000 operations. Base contacts are copper alloy, gold plated 10 microinches minimum over nickel plate. SPDT (DPDT) circuits are 3 (6) terminal circuits for true SPDT (DPDT) switching and compact spacing. Common pole terminals are marked with a C, and first and second throws are marked as 1 and 2.

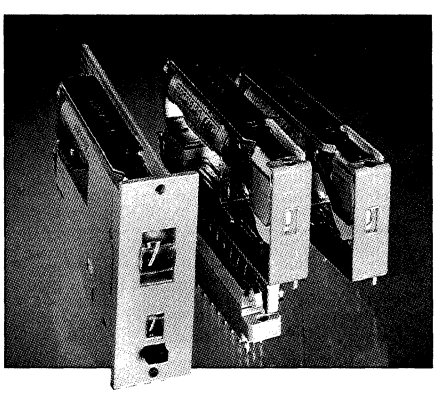
TOTAL CONTROL, TOTAL QUALITY

Everybody talks about quality, Hartmann does something about it.

That's because we have total control over design and production of our PCB code switches and pulse counters. We do it all in-house: design, materials selection, plastics molding, metals stamping, plating, final product assembly, testing. So we control quality every step of the process. And that results in reliable products at attractive prices.

With 27 years' experience worldwide, we offer a full line of BCD, BCD complement, and hexadecimal code switches and decadic pulse counters.



We can help you control the efficiency and quality of your production. With programs like just-in-time delivery, custom products, and special designs for your proprietary needs.

When you're ready to do more than talk about quality, talk to Hartmann, 10097 Tyler Place, Ijamsville, MD 21754, **(301) 831-1055.**

High Reliability Supported by Unique Technology.

Flux Scanning Method:

In spite of severe control of the sealing process, there is a slight probability that foreign matter such as magnetic particles may enter the glass. After extensive study in the detection of micro impurities, OKI has adopted the highly reliable flux scanning method. In flux scanning, external magnetism is moved so that foreign matter near the reed is forced to jump to the contact part. The contact resistance then measured is used as the standard for the selection of characteristics. We have thus succeeded in remarkably improving the reliability of reed switches by replacing conventional visual checking with the latest flux scanning method.

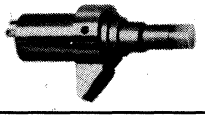
Typical Unique Applications of Janco Rotary Switches



DOUBLE MOMENTARY ACTION

Push button switch designed for grip stick applications. Actuation to first momentary detented position closes first circuit. Second detented position completes second circuit.

FEATURES UNIQUE ON-OFF OPERATION

Actuated by pulling knob out and rotating to "on" positions. While in "on" positions, circuitry cannot be shut off until knob is returned to "off" position and depressed.

MASTER COMMUNICATIONS SWITCH

Provides standard coded outputs and offers unique switching functions by longitudinal shaft movement. Momentary or maintained contact positions actuated by pulling shaft.

JET ENGINE START SWITCH

Knob is depressed and contacts are held in by the solenoid. After jet engine reaches desired RPM, system removes power disengaging solenoid. Lighted knob indicates function.

MEI T-5 SERIES LIGHTED KEYSWITCHES

DESCRIPTION

The T-5 lighted keyboard switch has long life (greater than 10 million cycles), low bounce, gold-plated cross bar contacts usually found in more expensive switches.

Mechanically, the T-5 switch incorporates precision tracking surfaces providing a smooth "feel" throughout its .170 travel. Each switch has two alignment studs and four to six solder points. This makes hand or wave soldered PC board assemblies extremely rugged for the most demanding applications, while keeping the manufacturing costs down by eliminating the need for metal mounting frames.

Electrical configurations include normally open, normally closed, double pole normally open, and alternate action. MEI stocks a 5V, 60 milliamp, 100,000 hour bulb for these switches. Lamp terminal spacing is .100 inch, to fit T-1 size lamps which can be changed from the front panel by end users. Lenses are stocked in eight colors.

MEI offers a complete line of non lighted T-5 switches and accessories for keyboard construction. These include the switches and keytops shown below, keytops for both 16mm and 19mm center arrays, relegendable keytops, space bars, wide keytops, leveling mechanisms, etc. In house engraving and printing is available for prototyping and low volume applications.

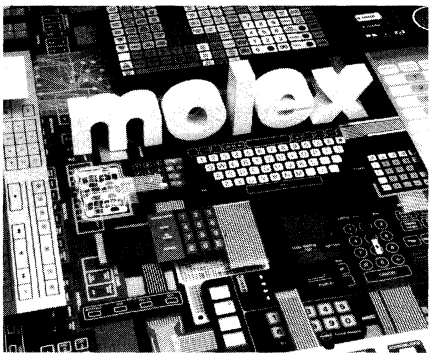
Custom-Designed and Standard Membrane Switches

The 10900 Membrane Switch consists of silver contacts deposited on two sections of a thin, flexible polyester sheet. A spacer layer with openings to create a contact gap is sandwiched between the two circuit halves and sealed with adhesive. Upon actuation the contact gap in the membrane decreases until both silver contact surfaces meet and close the circuit.

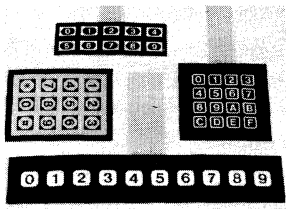
They are designed to be used in any application with low energy logic level switching requirements (28 V DC, 30mA) and resistance at termination in the 10/15 Ohm range or greater.

A custom graphic overlay is generally added for aesthetic appeal. As many as 15 colors are available on various laminates including velvet, suede, gloss or matte polyester or polycarbonate. Embossing, metallic finishes, and backlighting can also be specified as well as various circuitry and mounting options.

Tactile feedback and hybrid construction are also available



Molex Standard Membrane Switches



Molex realizes that often times your touch panel requirements could be satisfied by a **standard configuration** designed to easily interface with most common digital circuits.

We have, therefore, established a line of **readily available** Membrane keypads for those applications that do not justify a custom switch.

Standard switches are available from your local Molex distributor and may be purchased with or without standard graphic overlays and adhesive mounting sheets.

½ INCH SUBMINIATURE ROTARY "C" SWITCH

The Shallco subminiature ½ in. diameter "C" Series combines time proven (over 30 years) internal construction i.e., rotor, stator, wiper, with a cost effective die cast operating shaft and housing.
The Shallco "C" Series switches are designed to satisfy the most demanding industrial and commercial instrumentation requirements.
Shallco offers a unique ½ inch, 3 pole, 4 position, 30° switch and a greater selection of 36°, 45° and 60° switches than any other manufacturer.
The most cost effective switch combines the die cast shaft and housing. However, brass and stainless steel shafts are available and provide the flexibility needed to meet your exact requirements without over specifying. No other manufacturers offers this service.
Our nationwide network of representatives (see EEM yellow pages) is ready to respond to your requirements in an expeditious manner.

Contact Materials — Dry Circuit & Power Switching

Rhodium

Industry standard — recommended for general purpose applications. Low resistance, high melting point metal provides millions of trouble-free operations at low and medium loads.

Gold-Nickel Alloy

Specially developed plating and post assembly conditioning makes this alloy particularly resistant to hostile transients encountered in telecommunication circuits. Suitable for medium and high power loads.

Mercury Amalgam

Precision controlled mercury amalgam ensures contact resistance stability at low level switching over hundreds of millions of operations as required in automatic test equipment and instrumentation applications.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

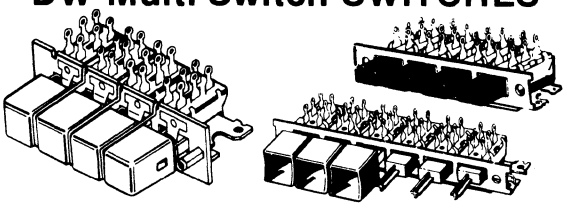
DW Multi-Switch SWITCHES



The DW (double-wipe) Multi-Switch switch is available up to 18 stations in a single row & ganged assemblies with interaction between rows. Max. switching per station is 4-C (4PDT). Each station utilizes specially designed switching modules with U-shaped, high reliable bifurcated contactors rated at 3 amps, A.C.; 0.5 amp, D.C., 125 V, non-inductive load. DW Multi-Switch switches are available in 5 series: 65000, 66000, 67000, 70000, and 71000. All provide four standard functions: **Interlock** — actuating a pushbutton automatically restores to normal the pushbutton previously actuated. **Lock-Out** — prevents operation of more than one pushbutton at a time. This feature is included on all interlock switches. **Non-Lock** — each pushbutton has momentary action. **All-Lock** — all pushbuttons, except release, lock when depressed. All pushbuttons restored to normal by actuating (momentary) release pushbutton. **Push-Lock/Push-Release** — pushbuttons lock when depressed and release when again depressed. **All Series** — pushbuttons on $^{3}/_{8}$" centers. DW Multi-Switch switches are available in single row assemblies with interlock and all-lock functions from one to twelve stations; with non-lock and push-lock/push-release functions up to 18 stations.

Series 65000—Non-illuminated, integral pushbutton.
Series 66000—Non-illuminated version of Series 67000.
Series 67000—Illuminated pushbuttons.
Series 70000, 71000—Non-illuminated, cross-rib plungers, accept up to 12 different styles of pushbuttons.

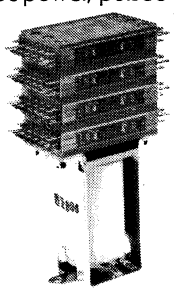
T-bar® THE SOURCE FOR MULTI-CONTACT RELAYS AND SWITCHES

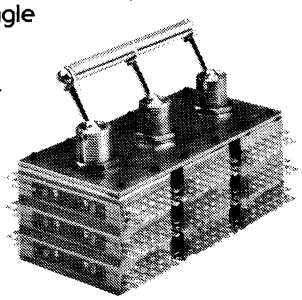
RELAYS

General purpose 800-series, with contact ratings to 5A, and 900-series with low-level to 1A ratings. Both available with 12, 24, 36, 48, and 52 poles in form A (N.O.), form B (N.C.), and form C (D.T.) and 60 poles, form A. Operation from continuous ac or dc power, pulsed power (latching), or solid-state logic. Environmentally sealed and hermetically sealed relays for aerospace, shipboard and ground support hostile environments are available.



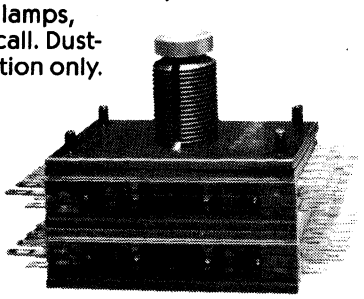
TOGGLE SWITCHES

Same 800-series and 900-series as relays. Available with 12 to 144 poles in form C, maintained action. Typical life in excess of 50,000 operations. Normally dust-tight, T-Bar toggle switches are also available in an environmentally sealed version.



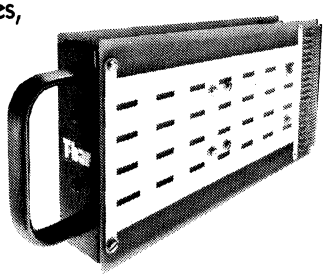
PUSHBUTTON SWITCHES

Momentary pushbutton switches, 800-series only are available with 12 to 36 poles, form C. Typical applications include press-to-test for control panel lamps, reset, and all-call. Dust-tight construction only.



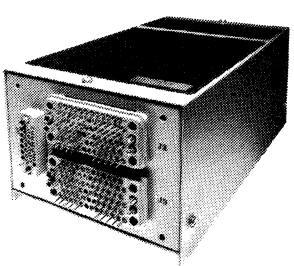
PLUGGABLE MODULES

Pluggable modules use standard T-Bar multi-contact relays in either a one relay configuration or two relays independently controlled with no common failure mode. Plugged into T-Bar printed circuit card cages, any desired switching configuration can be established by backplane wiring.



SELECTOR UNITS

Standard T-Bar relays, 800 or 900-series, are packaged as an automatic selector unit to random or sequential circuit selection and addressed through binary weighted coils. Available as Treeselect (all unaddressed lines remain open) or Norselect (all unaddressed lines connected to a bus), selector units can be provided with 16 to 128 positions.



CONNECTORS

T-Bar plug-on connectors are available for all relays and switches. Each connector provides wiring to one-half of a wafer deck (6 poles; A, B, or C). A 36-pole device, for example, requires 6 connectors. Two connector versions are available. One accommodates individual wiring with crimp-on connectors; the other is used to mass-terminate ribbon cable.

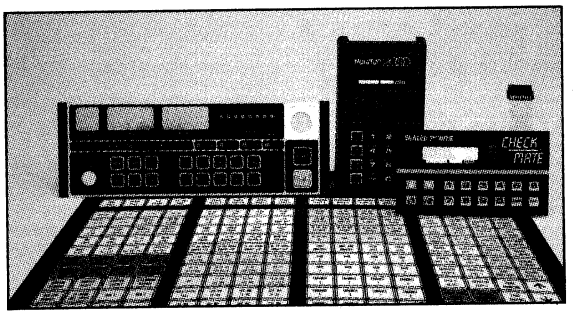
Bergquist Membrane Switches



Bergquist Company designs and builds custom membrane switches especially suited for harsh environments. Bergquist membrane switches are reliable and include the best graphics you can buy.

Bergquist membrane switches are often designed into an assembly to replace conventional discreet switches. Switch panels enable the designer to condense the control area and include more keys than bulky discreet switches will allow and in most cases show a significant cost savings.

Membrane switches are constructed in three different ways to meet the requirements of various applications. Circuitry can be either screened silver ink on polyester substrates or etched copper circuitry on a flexible or hardboard layer. These various constructions can be made with either pressure sensitive adhesives or Bergquist's HeatSealing for harsh environment applications. Screened silver is used for current levels below one watt and copper circuitry is used for current levels above one watt.

FEATURES

Bergquist offers many combinations of features which can be added to the basic switch constructions. These include:

- ***HeatSeal***™ The HeatSeal switch is especially designed for applications with harsh environments. Layers are bonded together with thermoplastic adhesive which completely protects them from contamination.
- LEDs added to the copper hardboard or flex copper switch.
- Embossed domes on silver switches or stainless steel snap domes for copper switches to provide tactile feedback.
- Rim or pillow embossed graphics to enhance the look and feel of switches.
- Backer panels added to the switch panel with optional studs for mounting.
- Adhesive backed switch panels to aid in mounting the switch panel to the assembly.
- A variety of interconnects for both flex circuits and hardboard switches. These include male and female pins, headers, IDC connectors, and others.
- Electroluminescent lamp panels.
- Integral lenses screened into the graphic layer, eliminate cut-outs or die-cut lenses where applicable.
- Special shielding materials such as screened silver, vapor deposited gold or aluminum, aluminum foil or Kapton for EMI/RFI and ESD shielding.
- Deadfront nomenclature which is only visible when backlit.
- Selective textures applied to the graphics layer ranging from rough to matte to non-glare to glossy.
- Hardcoated graphic panels for improved chemical and abrasion resistance.
- Custom color using recognized color matching systems such as PMS, Federal Standard and Muncell or an actual sample to be matched.

THE BERGQUIST LABORATORY

To guarantee the quality and reliability of each membrane switch, Bergquist Company has developed a complete in-house laboratory. The laboratory tests materials, processes and completed membrane switches.

Materials compatibility is a key factor in the reliability of a switch panel. Each material is analyzed and tested alone and in combination with other materials before any construction begins. This is done to prevent interactions between materials after construction, for instance, solvents in pressure-sensitive adhesives could soften conductive silver inks if not carefully controlled during manufacturing.

Along with materials compatibility, the Bergquist laboratory has done extensive testing on the effects of pressure on vented and nonvented switches, hardcoating of graphic panels, membrane switch life, actuation force and modes of failure in dielectric jumpers.

Environmental testing attempts to simulate the field environment of completed switches. Switches are tested under extremes of heat, humidity and pressure. Life testing subjects switches to millions of actuation cycles and graphic panels are exposed to chemicals and abrasives to test hardcoating.

The Bergquist laboratory also works closely with trained quality control specialists to monitor each step of the production process.

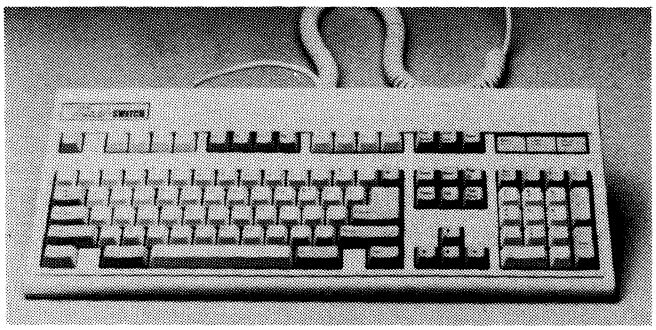
EECO® KEYBOARDS, KEYPANELS, MEMBRANE PANELS

Full-travel microcomputer/data entry keyboards from EECO/Maxi-Switch



- Available now — revolutionary NEW MEMORY PRO™ for optimum PC/XT, AT computer use.
- Custom hardware and/or software.
- Plug compatible with IBM PC/XT/AT and other leading computers.

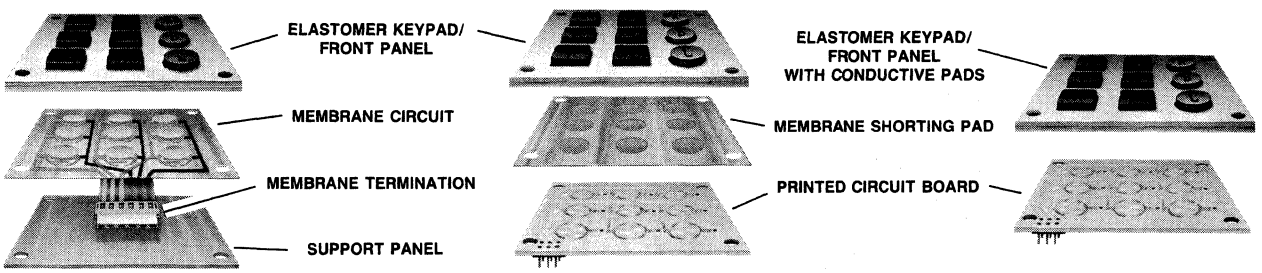
- Sealed keyboards for industrial use.
- Conductive elastomer, hard contact mechanical, membrane, reed switch technologies.
- US and international language versions available.

Low-profile elastomer keypanels can be customized to individual needs. Here are three typical choices . . .



Elastomer/membrane construction suits applications that call for the reliability and environmental protection of a fully sealed assembly. The membrane termination is an integral part of the circuitry, saving the cost of soldering and cable connections.

Elastomer/shorting pad/PC board construction fulfills the requirements of applications that call for board mounted components, while retaining all the benefits of sealed circuitry.

Choose the **conductive elastomer/PC board configuration** when your application does not require sealed circuitry but does demand a reliable keypanel at a lower cost.

Flat-panel membranes featuring embossed graphics, backlighting/ deadfronts/lenses, selective texturing.

Other design options include . . .

- CAD generated designs.
- ESD/EMI shielding.
- In-house PC board fabrication.
- Support panel interface.
- Tactile feedback.
- Fully sealed construction.
- Standard membrane panels available.

IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.

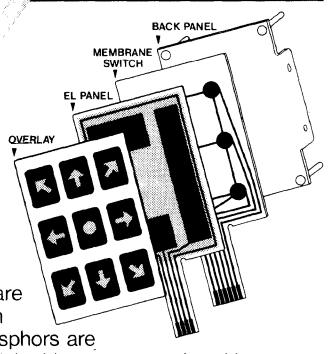
MEMBRANE SWITCH CONSTRUCTION



1. GRAPHIC OVERLAY
Subsurface and/or top printed on polycarbonate. No limit to perfectly matched colors. Top printed graphics are protected by solid or selective surface textures. Overlay designs can include transparent or tinted display windows, embossed and die cut areas.

2. ELECTROLUMINESCENT LAMP*
FLEX/EL™Electroluminescent Panels are flexible, composed of a thin, plastic film base and an encapsulant film. The phosphors are energized by AC to emit cool, uniform light. Lit areas are printed in any desired configuration. The assembly is laminated to seal it from environmental attack.

3. MEMBRANE SWITCH
Normally open, single pole, single throw momentary contact device. Consists of three layers of thin, flexible film-- printed circuit patterns, insulators and spacers-- printed, die cut and bonded with high strength adhesive to form flat, sealed switches. Conductive patterns are printed on the facing, inner surfaces of the two outermost layers, which are separated, everywhere except at the contact pad, by a polyester or polycarbonate "spacer." Light, direct pressure activates the switch. Tactile feedback can be built in. Supplied unterminated, or with solder tabs, male or female headers.

4. PRINTED CIRCUIT BOARD AND/OR SUB PANEL
Membrane Switches can be installed, at the factory, to a GM-made or customer-supplied PCB and/or sub panel, or formed to fit within a particular housing shape.

** FLEX/EL™ panels are manufactured from GM Nameplate, Inc. products and DUN-L.A.D.® screen printable electroluminescent films. DUN-L.A.D.® films are a product of Dunmore Corporation, Newtown, Pennsylvania USA.*

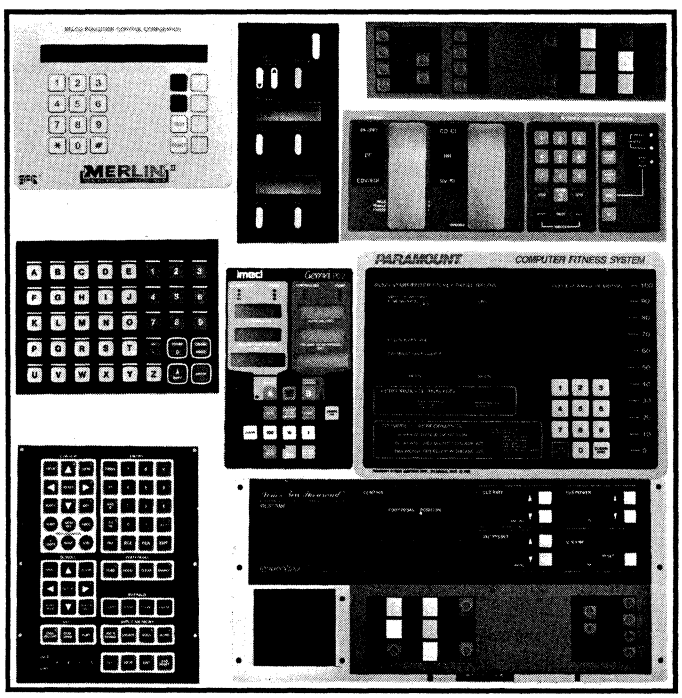
LEADERS IN FLAT PANEL TECHNOLOGY

At Jayco we manufacture only flat panel switch products. This specialization has enabled us to design and manufacture products that are consistently preferred for their visual appeal, switch performance, and quality standards. These products include:

MEMBRANE SWITCHES **HYBRID SWITCH PANELS**

KEYBOARDS AND KEYPADS **SILICONE RUBBER KEYPADS**



MEMBRANE SWITCHES

Membrane switches are normally open, momentary contact switches. Their light weight and low profile (0.030" - 0.040" thick) make them ideal for use on portable equipment and on rack, console and desktop units where space may be limited.

Membrane switches are more reliable and economical than conventional switching systems and they add design flexibility which simply isn't available with any other switch technology.

Simplicity = Dependability. The switch consists of two contacts, one above the other, separated by a specific volume of air. Finger pressure on the top contact closes the switch, and release of pressure opens it.

The contacts are usually made of printed conductive ink. Therefore, membrane switches are designed specifically for low voltage and low current applications (see technical specifications).

HYBRID SWITCH PANELS

Membrane switches are made of flexible materials. Hybrid switch panels utilize some aspect of membrane switch construction, but are built on printed circuit boards. They are therefore, a hybrid of membrane and PCB technology.

All hybrid switch circuitry is usually contained on the PCB and switch closure is performed by either a printed membrane or a metal dome (as in a tactile switch).

Hybrid switches can be mounted directly to your chassis with no additional sub-panel required. They can also be supplied as a sub-assembly complete with connectors, hardware and LEDs mounted and ready for installation. Significant savings result from the reduction of the number of components necessary to order, stock, and assemble.

Hybrid switches provide all the advantages of design freedom offered by membrane switches as well as conventional mounting and connection techniques.

KEYBOARDS AND KEYPADS

These simple switch arrays usually do not incorporate all the design features available with custom membrane switch panels. Since Jayco manufactures custom keyboards and keypads to your precise design there are no limitations regarding size, layout, number of switches, circuitry or graphic design. You receive an economical keyboard with no standard keyboard compromises.

SILICONE RUBBER KEYPADS

These are an effective alternative to membranes where additional tactile feedback is required. Switch travel is typically 0.040" - 0.060" versus 0.015" for membranes and this is achieved at lower operating pressures. Silicone keypads can be conductive or non-conductive and with integral or separate keytops. Silicone keypads can also be designed into membrane and hybrid switch panels to produce totally integrated front panel assemblies. Call for further information.

FLAT PANEL DESIGN OPTIONS

The following is a guide to aid in the selection of appropriate features. Contact your sales representative regarding any questions you may have.

EMBOSSING

Any part of the front panel can be embossed to add a third dimension. Switch areas are those most commonly embossed.

Embossing is usually pad or rim type. With pad embossing, the entire switch area is raised like a top hat. Rim embossing raises the outline of the switch like a crater. Rim and pad embossing can be combined for special effect.

The type of embossing most appropriate depends upon application. Pad embossing gives a more conventional keyboard appearance and is generally used with tactile switches. Rim embossing assures better switch location, an important factor in applications requiring a lot of data input.

Unlike many others, Jayco embosses all overlays in-house. Proprietary techniques provide exceptional results, lower tooling costs, and a perfect match between printing and embossing.

TACTILE FEEDBACK

Tactile feedback is the snap action felt at switch closure. It's achieved by the oil can effect of a stainless steel or polyester dome and gives positive feedback of closure. It's important in applications utilizing unskilled operators or where other forms of feedback are impractical.

Jayco makes switches with both stainless steel and polyester domes, depending on the application requirements. Metal domes offer consistency of operation and reliability. Plastic domes are considerably more economical, and make tactile feedback a practical feature, even on large switch arrays.

Our new tease-resistant tactile feedback mechanisms guarantee simultaneous contact and snap with both metal and plastic dome systems. This is a significant improvement over other designs and effectively eliminates the possibility of miss-keying.

SELECTIVE TEXTURING

This process allows Jayco to offer a textured background with optically clear windows for LCD displays on one uninterrupted surface. The technique can also be used to highlight particular functional areas of switch panels. For example, the background can be textured and the switch areas polished. This makes the switches more prominent while adding interest to your panel. Your sales representative has samples.

SHIELDING

All Jayco panels can be specified with EMI/RFI or ESD shielding. The shielding is usually between the overlay and the switch layer for maximum protection. Grounding or connection to the shield can be by separate tab, through the connector, or through hardware.

DISPLAYS

Through proprietary processes, Jayco can provide one piece or laminated display windows for almost any kind of display device. Windows can be transparent for use with LCDs or filtered for use with LEDs or vacuum fluorescent displays. Standard filters are available in red, green, or grey. Other filters available upon request.

In addition to providing windows for display devices we are now able to integrate thin film plastic LCDs within a membrane switch to provide seven segment displays, annunciators and lit switches, all in an assembly less than 0.060" thick. Please call for more details.

DEADFRONT PANELS

Deadfront or secret-til-lit panels are invisible or blank until their displays are lit from behind. It's typically used for warning displays or where a normal display would clutter up the appearance of the panel. Deadfront makes a complex instrument appear simpler to the user while making the displays more effective.

JAYCO DESIGN ENGINEERING, MANUFACTURING AND QUALITY

Jayco is a true custom house, and for us all the above factors go hand in hand. To us custom does not mean adapting a standard design to a new configuration but instead requires that each project undergo a careful analysis of customer requirements, application details, and the expected environment. Only then will appropriate materials and construction methods be determined.

All switch panels must undergo a comprehensive array of tests including aesthetic qualities, mechanical dimensioning, electrical testing, actuation force and life expectancy. But perhaps the most elusive quality to capture in a membrane switch is batch to batch consistency and reliability. As a result of our exclusive concentration on flat panel switch products we have devised systems that assure the required consistency. These together with quality assurance systems to provide manufacturing to MIL-I-45208 A, enable a higher degree of reliability than is available elsewhere.

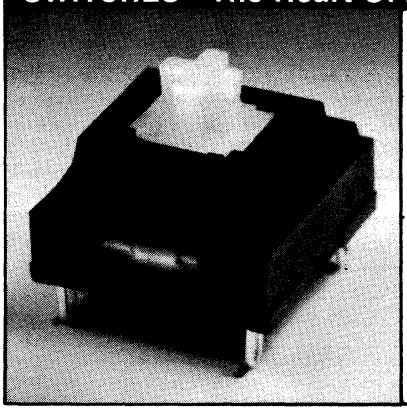
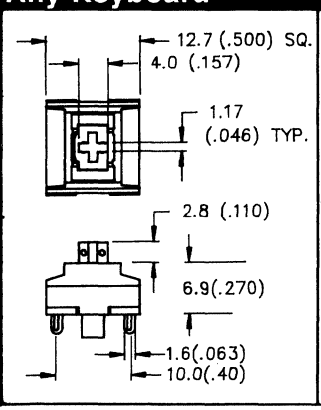
MEI Components Make In-House Keyboard and Keypad Construction Easy and Cost Effective

SWITCHES - The Heart Of Any Keyboard

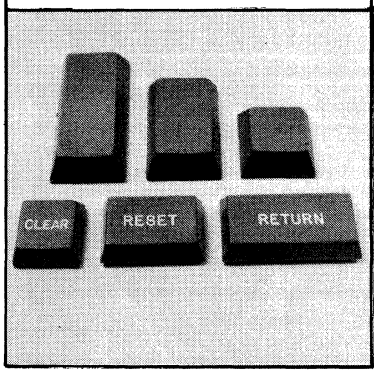


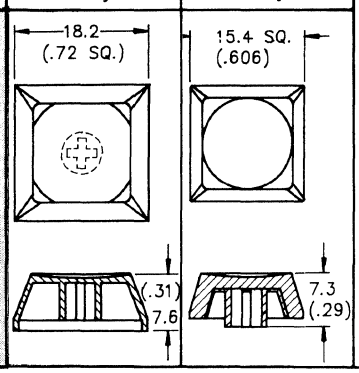


MEI's new T-15 Keyboard switch is produced and tested on fully automated machinery in the USA providing a quality and low price not matched with hand assembled switches. With their sealed contacts they may be easily wave soldered and aqueous cleaned along with other components. Primary features are:

- Sealed low resistance, low bounce contacts
- Very low profile, full travel, tactile response
- Built-in wide jumpers allowing a single sided matrix
- Spring like terminals to hold switch while soldering
- Industry standard cruciform keytop mount
- Stable mounting without a metal sub-panel
- Center to center mounting as close as 12.7mm

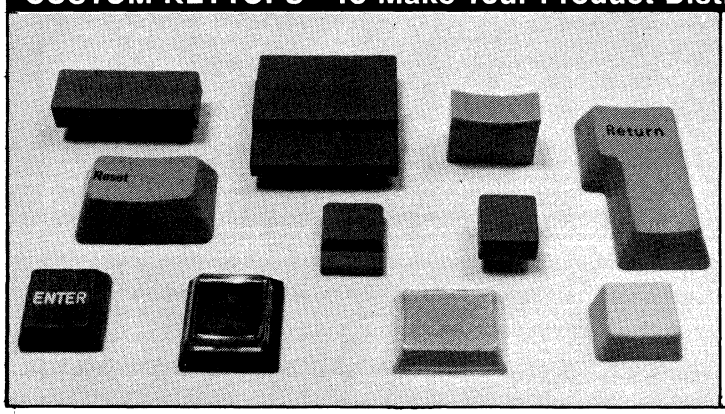
STOCK KEYTOPS - For A Fast Start





MEI offers from stock two styles of keytops to fit the T-15 switch, one for mounting on 19mm (0.75) centers and the other for a closer mounting of 15.8mm (0.625). Each is complete with 1½X, 2X and space bar lengths. Leveling kits for wide keytops are also available. A complete assortment of the most frequently needed legends such as numerals and ASCII symbols is maintained in stock as well as blanks in 5 colors. Hand engraving, custom pad printing and doubleshot molding are additional services MEI offers with the stock keytops.

CUSTOM KEYTOPS - To Make Your Product Distinctive



MEI makes extensive use of miniature family molds both for itself and its switch customers. As a result a custom keytop shape can be tooled for hundreds, not thousands of dollars, and in a reasonable time. We offer this service to OEMs whose product requires unique keytops to improve functionality or set it apart from the competition.

CUSTOMER ASSISTANCE - Provided Before and After The Sale

With years of experience in keyboard construction MEI is able and willing to assist with any design problems from the PCB layout to the selection of the most cost effective keytop legending system. This service extends to introducing customers to other sources for keyboard hardware and keytops when required.

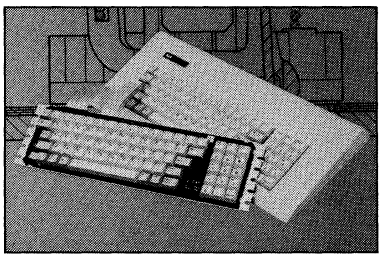
OAK Keyboards and Keypads



Low Profile FTM Keyboards

Measuring just 19.9mm from the center of the home row keycap to the bottom of the aluminum baseplate, Oak's low profile FTM keyboard allows designers to place the FTM in an enclosure and still meet the international 30mm DIN standards.

One of the most notable features of the keyboard is a rocker mechanism which gives a distinct nonfatiguing feel for the keyboard operator. Other features include LED indicators for shift lock and function keys, variable operating force, RFI/EMI/ESD protection, single tail termination and custom encoding electronics. Oak's FTM keyboards can be customized to meet specific design requirements with options in profiles, legends, colors, keycap styles, enclosures and more.

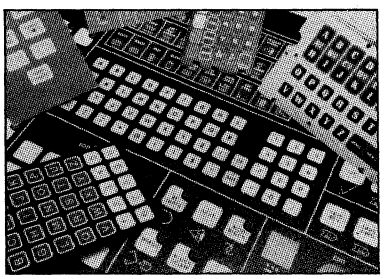
Standard Keyboards

Oak's newest line of keyboards is available in several standard styles, including the 101 and 84 function key styles. These competitively-priced keyboards come with a choice of linear or tactile feel as well as key legend and case color modifications.

The popular KB-101 keyboard features 12 user-programmable keys, a separate numeric keypad and four cursor movement keys. The 101 function keys allow the user to more effectively utilize the advanced functions of the today's high performance PC's. The KB-101 is specially designed to provide compatibility for PC/XT, PC/AT and Enhanced AT configurations.

The KB084 incorporates ten user-programmable keys on a separate keypad. The 84 function keys support the extended set of 256 characters, including scientific notation and foreign language characters for PC/AT and PC/XT configurations.

Request brochure F-1131.

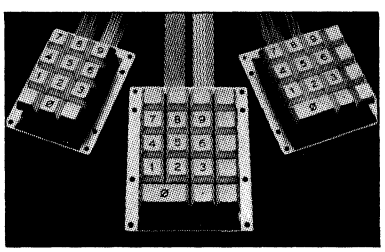


Membrane Switches

Oak Micromotion membrane switches offer the ultimate in environmental resistance and flexibility, and come in a choice of many sizes, colors and designs. Tactile feel is also available.

The membrane switch product line consists of two designs. Type A products use rigid single- or double-printed circuit boards. Operating voltage: 1 to 50 (AC or DC). Operating current: 0.05 to 100 milliamps. Type C products are completely film-based, using a non-rigid polymer-substrate instead of a PC board. Termination is achieved via a "tail" which is compatible with standard commercial connectors. Operating voltage: 1 to 30 (AC or DC). Operating current: 0.05 to 50 milliamps.

Request brochure F-1087.

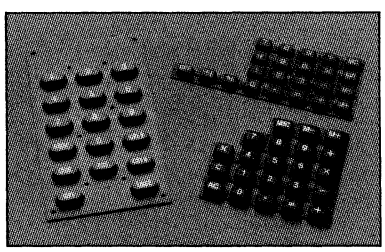


Full Travel Membrane Keypads

Oak's rugged full travel membrane keypads are low cost with high reliability and life expectancy rated at 100 million cycles per key. The keypads are EMI/RFI shielded with a front-sealed design that protects the contacts against spilled liquids, dust and other contaminants. The pretravel and overtravel features promote operator ease, input accuracy and low fatigue.

Available in standard or low profile, Oak FTM keypads are useful in a wide range of data entry applications. The FTM keypad comes in standard sizes of 3″ x 4″, 4″ x 4″ and 4″ x 5″ with a full travel of .160 in. Low profile FTM keypads are available with a .150 in. travel for DIN compatible designs.

Request brochures F-1118 and F-1118A.



Silicone Rubber Keypads

Oak also offers conductive and non-conductive short-travel rubber keypads in custom versions or standard 3″ x 4″ size. Made of silicone rubber, they are resistant to ozone, corrosion, contamination and puncture. The keypads operate at a temperature range of -40°C to +85°C and perform up to five million cycles depending upon stroke, key pressure and snap effect.

Available with a choice of tactile feel in a key travel range of 0.3 to 6.0 mm, these keypads require an actuation force of 30-260 grams.

In the non-conductive versions, the rubber keypad serves as the switch actuator over a three-layer membrane panel. Conductive keypads utilize a carbon-impregnated silicone "pill" molded on the underside of the rubber dome to accomplish the switching. The conductive switch mounts onto a glass epoxy PC board.

Molded translucent or opaque, the switches are available with custom color options, LED backlighting and alphanumeric or symbolic legends screened onto rubber or plastic keycaps.

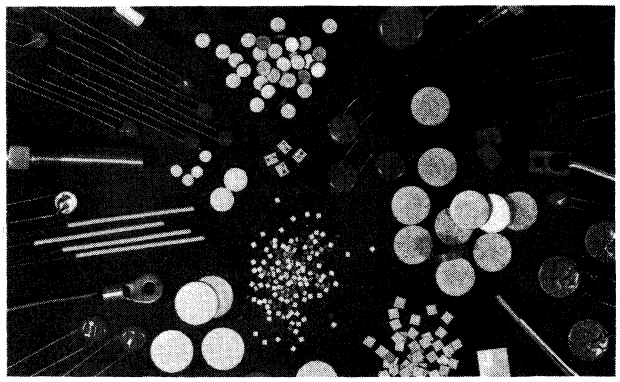
INTRODUCTION

Thermistors are temperature sensitive passive semiconductors which exhibit a large change in electrical resistance when subjected to a relatively minute change in body temperature. Negative temperature coefficient (NTC) thermistors decrease in resistance when subjected to an increase in body temperature. Conversely positive temperature coefficient thermistors (PTC) increase in resistance when subjected to an increase in body temperature. Ametek-Rodan Division manufactures NTC thermistors as well as two basic types of PTC thermistors. The silicon PTC offers a nearly linear positive temperature coefficient of approximately +.7%°/C and the switching PTC thermistor which exhibits a very large increase in resistance (several powers of 10) over a designated temperature range. Their extreme sensitivity to minute temperature changes enables them to perform many unique functions heretofore impossible with standard electronic components.



NEGATIVE TEMPERATURE COEFFICIENT THERMISTORS

The NTC devices are available in resistance values from less than 1 ohm to 1 megohm, and in sizes ranging from 0.010 inch cubes to 1 inch diameter discs. Available configurations include: discs, chips, rods, bars, probes, and resistor/thermistor networks. Units can be molded, dip coated, or encapsulated to your specifications, using packaging materials such as epoxy, glass, or high temperature silicon resin.

SURGE-GARD™ INRUSH CURRENT LIMITING DEVICES

DESCRIPTION

Rodan® SURGE-GARD devices are manufactured of a specially-formulated metal oxide ceramic material which is capable of suppressing high inrush current surges. They are especially useful in power supplies (See Fig A) where, due to the extremely low impedance of the capacitor being charged, the bridge is subjected to an exceedingly high current surge at turn-on. The SURGE-GARD, being of relatively high resistance, limits the current for 1 to 2 seconds during which time the device decreases in resistance substantially to a point where its voltage drop is negligible.

2 I_{max} = The maximum steady state DC or RMS AC current.

3 * RI_{max} = The approximate resistance under maximum steady state current conditions.

4 **Max Operating Temp** = All Rodan Surge-Gard devices are rated for operation to a maximum ambient temperature of 65°C. If your application requires operation above 65°C ambient, please consult Rodan's applications engineering department.

5 **Recovery Time** = Since Rodan Surge-Gards self-heat due to current flow, which in turn causes a reduction in their resistance, the devices require cool-down time after power is removed. The cool-down time allows the resistance to increase sufficiently to provide the required inrush current limiting. This time varies with the particular device, mounting method and ambient temperature. Usually, a one minute cool-down period is adequate. Selection of capacitor bleeder resistors which will provide a one minute or so bleed down time can eliminate the cool down time requirement.

APPLICATIONS

If the resistance of one Surge-Gard does not provide sufficient inrush current limiting for your application, two or more may be used in series or in separate legs of the supply circuit. Surge-Gards cannot be used in parallel since one unit will tend to conduct nearly all the current available. Surge-Gards may be used in the AC (Point A or B) or the DC (Point C or D) locations in the circuit.

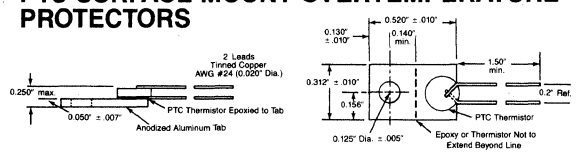
The values for dissipation constant and time constant are for reference only. Mounting method and environmental conditions can affect these parameters.

PTC SURFACE MOUNT OVERTEMPERATURE PROTECTORS



OVER CURRENT PROTECTORS

The PTC over current protector is connected in series with the load which is to be protected. During normal operating conditions, the PTC remains in its low resistance state resulting in negligible attenuation to current flow. When a short circuit or over-current condition occurs, the PTC will switch into its high resistance state thereby limiting the current flow in the circuit to a point well below the normal operating level. When the fault condition is removed, the PTC will return to its low resistance state allowing the current flow to recover to its normal level. Ametek-Rodan Division produces over-current protectors for a whole range of load protection applications.

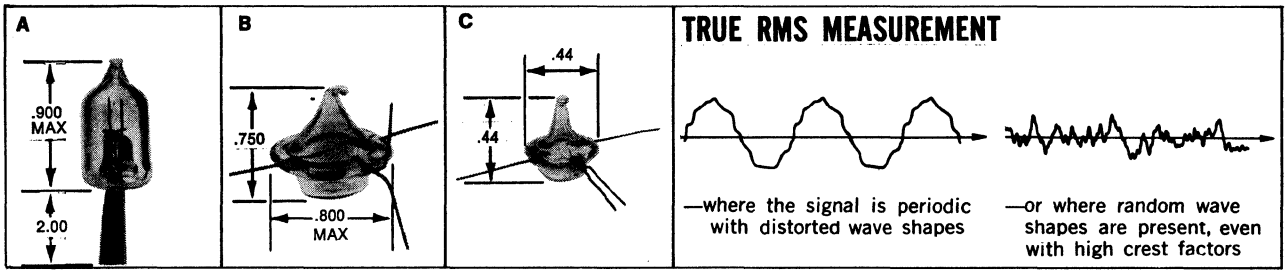
VACUUM THERMAL CONVERTERS

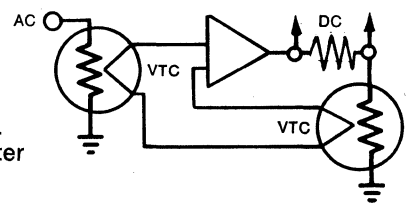


Vacuum Thermal Converters (VTC) provide a simple solution to a difficult design problem. That problem is, economically measuring the true RMS value of a current independently of waveform and frequency.

While VTCs have been in existence for many years, their work is often not understood. The basic structure looks like a simple incandescent light bulb. The outer shell is clear glass. There is a near total vacuum inside. The active elements are a heater wire with a thermocouple suspended at midpoint.

Current flows through the heater wire and the thermocouple measures the temperature at midpoint. This midpoint temperature is proportional to the true RMS current through the heater wire. The ability to calibrate at DC and measure AC accurately is inherent.

Operating range is from 0 to 65 MHz for standard pattern models, up to 300 MHz for UHF pattern and up to 1 GHz for miniature UHF pattern models. Miniature models are supplied in a low profile glass shell.



Typical application.

INTERCHANGEABLE CURVE TRACKING AND POINT MATCHED THERMISTORS

Interchangeable curve tracking thermistors

are "curve matched" to desired temperature tolerances over selected temperature ranges. They allow component standardization and can reduce cost associated with assembly because they are "interchangeable" to within the tolerance and temperature range specified without re-calibration. They are ideally suited for use in microcomputer measurement and control circuits. The temperature tolerance corresponds to a resistance tolerance based on the temperature coefficient at each temperature point within the specified range. Standard temperature tolerance and ranges are listed below, along with the available styles and resistances.

To specify, add the appropriate suffix from the following table to the part number.

Example: 1M1002-B3 = Curve 1, 10K @ 25°C, interchangeable to ±.5°C from 0° to 70°C.

	TEMP. RANGE	0°C to +70°C			−20°C to +50°C		0°C to +100°C			+20°C to +90°C			0°C to +50°C

Point Matched Thermistors

are available for applications which require a specific resistance value matched to a specific temperature point. (Example: 10,000Ω ±2% at 80°C). They are useful for applications which require temperature monitoring at a critical temperature point to control, measure, or shutdown. Consult factory with requirements. Note: All thermistors listed in this catalog are point-matched thermistors at 25°C. (X Styles at 70°C)

SENSOR ASSEMBLIES AVAILABLE TO MEET STANDARD AND CUSTOM REQUIREMENTS

The 3100 thermostat is a single-pole, single-throw switch activated by a snap-action bi-metal disc. Temperature calibrations are preset at the factory, and each unit is 100% thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically sealed steel housing, with glass-to-metal seal at the terminal junction.

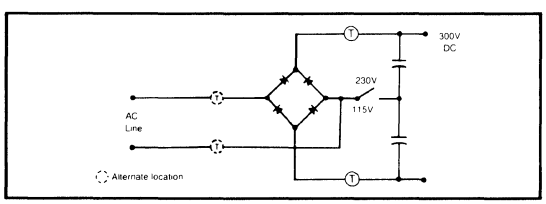
INRUSH CURRENT LIMITERS



The circuit diagram above displays a typical way to limit inrush current.

Protection against extremely high peak inrush current, especially in AC/DC switching power supplies, is now available with Keystone Inrush Current Limiters. These special NTC thermistors effectively control surge currents because the thermal time constant of the current limiter is longer than the electrical time constant (RC) of the thermistor and the capacitor.

All inrush current limiters are insulated with a protective coating.

PTC SURFACE-MOUNT OVERTEMPERATURE PROTECTORS

Positive Temperature Coefficient (PTC) thermistors — act as solid-state switches. A typical application of these surface mount units is to prevent destruction of a power transistor.

The PTC Sensor is mechanically mounted to the power transistor package. The PTC thermistor measures the surface temperature of the transistor. When the temperature of the transistor case reaches a critical point, the PTC switches and turns off the drive circuitry for the transistor. This action prevents its destruction. Then, as the transistor cools, so does the thermistor, automatically resetting itself to once again guard the power transistor.

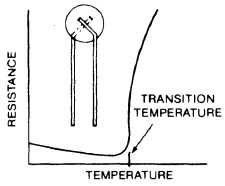
PTC — POSITIVE TEMPERATURE COEFFICIENT THERMISTORS



Positive Temperature Coefficient (PTC) thermistors are characterized by an extremely large resistance change in a small temperature span. The figure at left depicts a generalized resistance temperature plot for a PTC. The temperature at which the resistance begins to increase rapidly is referred to as the transition temperature. This point can be changed from below 0° C to above 160° C.

TYPICAL PTC APPLICATIONS

• Automatic Color TV Degaussing • Air Flow Measurement • Non-Destructive Fuse • Single Phase Motor Starting • Liquid Level Sensing • Combination Heater-Thermostat • Arc Suppression • Time Delay Fusing.

NTC THERMISTORS

MANUFACTURED BY MIDWEST COMPONENTS, INC.

TAB MOUNTED PROTECTORS

Midwest Components' Over Temperature Protectors provide shutoff or regulation of expensive Power Transistors and protect against over-heating that occurs from component failure or short conditions. The sensor is an NTC (Negative Temperature Coefficient) device. Unlike fuses or bi-metal elements its action is recyclable and has no hysteresis effect. Available in resistance packages from 10K to 100K in tolerances of ± 10% to .8%.

SUPPRESSORS

INRUSH CURRENT SUPPRESSORS FOR SWITCHING POWER SUPPLIES.

Switching power supplies present high initial currents due to filter capacitor impedance upon turn-on. The use of Midwest's NTC (Negative Temperature Coefficient) devices limits this current to a low value. After current flow their resistance becomes negligible and offers little voltage drop.

DISC THERMISTORS

Disc Series Thermistors are small rugged Thermistors with close electrical tolerances. Their small mass gives short thermal time constants, yet they are not so small that it is difficult to handle them. The tinned copper leads are easily soldered into electrical circuits.

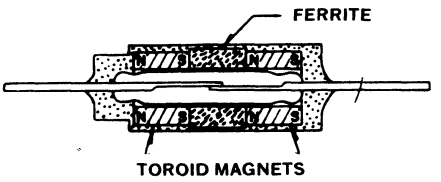
TEMPERATURE SENSING SWITCHES

MANUFACTURED BY MIDWEST COMPONENTS, INC.

CONVENIENT AND RELIABLE TEMPERATURE CONTROL

Miniature temperature switches use an electro-ceramic element instead of a bimetallic switch. The Reed Switch Temperature Sensor works on these two principles: a reed switch actuation occurs because of changes in strength of a magnetic field in the vicinity of the contact gap; and certain materials exhibit great changes in magnetic reluctance when the temperature is varied in the vicinity of the material's curie temperature.



The unit has good response time, and is operable in a variety of atmospheres and solutions. Variations in configurations suitable for installation in automotive engine crankcases and automatic transmissions, or mountings for use in computer cabinets are possible. Other applications include oven over-heat alarms, corrosive liquid temperature control, food freezer thaw warning and cooling fan stop indication. This switch replaces many thermally actuated devices now used where increased life is required or protection of the switching contacts from adverse environments is deemed desirable.

MOLDED SWITCHES

Switches feature small size for fast response. epoxy package resists most chemicals and is good for use up to 115°C. Standard units from 0° to 115°C are available in five degree nominal increments.

FREEZE SENSORS

The Solar Freeze Sensor, Catalog Number TS-5B1, was developed to provide controller activation before freezing conditions damage collector. This activation will then provide recirculation or drain down to protect system. To meet the needs of high temperature exposure, the switch is packaged to withstand 400°C. Switch has also found application as road surface freeze indicator, refrigerated van warning sensor and is widely used as a frost sensor in the agricultural industry.

BI-METAL TEMPERATURE SWITCHES

MANUFACTURED BY MIDWEST COMPONENTS, INC.

SNAP-ACTION BI-METAL SWITCHES

The electrical switch of the SAS is operated by a thermally-responsive ½inch diameter bimetal disc. The switch is used as a temperature limiting or regulating thermostat. Because of its relatively small size and inexpensive design, it is suitable for a vast array of applications.

Features

Impact Action: The bimetal disc of the SAS is factory calibrated at both its top and bottom temperatures. When the disc, which is dished like a saucer, reaches its calibrated temperature it suddenly snaps through and imparts its kinetic energy to the bumper, then to the contacts. The resulting high speed of contact separation insures long life at high electrical loads, and a minimum of radio and TV interference.

SNAP-ACTION HERMETIC SWITCHES

Midwest Components, Inc. introduces the SAH series control which offers the advantages of bimetal disc technology in a miniature mounting package. Developed for application to printed circuit boards, it is housed in a standard TO-5 package and is designed to switch logic level circuits.

The operating temperature of the SAH can be specified between 30°C and 120°C. The gold alloy crosspoint switch contacts are operated by a snap acting bimetal disc. This assures high speed contact separation, as well as calibration stability throughout its rated life of 10,000 cycles.

The SAH design includes a hermetically sealed case for wave soldering and cleaning operations, as well as application in harsh environments. The SAH is designed for reliable operation with loads as low as 1mA at 10mV DC, or up to 1A at 35V DC.

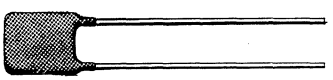
POLY FUSE

MANUFACTURED BY MIDWEST COMPONENTS, INC.



The polymer is designed for automotive and marine motor protection. It protects against over-current conditions by switching from a low resistance (typically less than 200mΩ) to a high resistance (greater than 5KΩ when its rated current is exceeded. (Fig. 1) When power is removed it will automatically return to its low resistance state.

Maximum Voltage — 40 VDC continuous.

Functional Advantages

Solid State. No moving parts. Switching is accomplished internally in response to a temperature rise that exceeds the built-in switching temperature.

Stable Resistance. The resistance will remain within specified design values even after hundreds of switching cycles.

Self-Restoring. When power is removed, it will automatically return to its low resistance state. Will not cause a false reset like bi-metal breakers.

Fool Proof. The PolyFuse is normally mounted on the printed circuit board and cannot be readily replaced with a higher rating or circumvented like cartridge type fuses.

Typical Applications

- Power Windows
- Windshield Wipers & Washers
- Power Antennas
- Cassette Drives
- Power Seats
- Power Door Locks

PTC SWITCHING THERMISTORS

MANUFACTURED BY MIDWEST COMPONENTS, INC.

THE POSITIVE WAY TO SENSE, MEASURE, CONTROL, REGULATE AND PROTECT.

MIDWEST COMPONENTS INC. **PTC switching thermistors** are thermally sensitive resistors which exhibit large positive increases in resistance with temperature. At customer specified temperatures the resistance rises abruptly from a low value to a high value. This resistance shift is infinitely repeatable and has no hysteresis associated with its action.

• CURRENT LIMITERS

The ceramic element protects circuits from destructive overcurrent conditions by switching to a high resistance which trims the current back to a safe level. The unit then recovers automatically when the overcurrent condition is corrected.

The ceramic current limiter is an inexpensive alternative to fuses and fixed resistors. It has obvious advantages over all of these since it has infinite life, is self resetting which eliminates field servicing and will not "flame out" eliminating the fire hazard of fixed resistors.

SELF REGULATING DISPLAY HEATER

The unique self-regulating heating effects of specially doped ceramics are utilized to create a new type heater for liquid crystal or other temperature sensitive displays. These devices produce heat at cold temperatures and curtail heating at normal or high temperatures. This feature allows its use in battery operated instruments due to low normal current drain. Use of this heater allows a broader application of displays by removing the adverse effects of temperature.

Heater is attached to reverse side of display with thermally conductive epoxies or silicone adhesives depending upon display's thermal coefficient of expansion or temperature to which it may be subjected. Actual performance of the display will depend upon manufacturers specifications.

POSITIVE OVER TEMPERATURE PROTECTORS

MIDWEST COMPONENTS' Over Temperature Protector provides shutoff or regulation of expensive RF or AF Power Transistors. Protects against over heating that occurs from output stage component failure, antenna breakage, or short conditions.

Unlike fuses or bi-metal elements its action is recyclable and has no hysteresis effect.

Also available:
- Other switching temperature or resistances compatible with package constraints.
- Special lead types or end terminations.
- Body styles for protection of TRIAC or SCR Rectifiers.

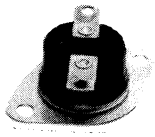
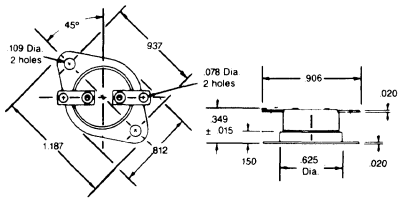
STOCK ½" DISC THERMOSTATS

SC/SO



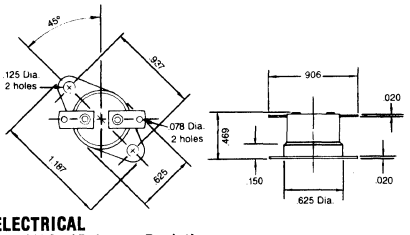
These compact thermostats are the industry standard. As with all of our snap-action thermostats, a C in the part number means the circuit will close when the temperature rises and an O in the part number means the circuit will open when the temperature rises. Snap-action means reliability. A high-force bimetallic disc inside these thermostats keeps the circuit the way you want it. The thermostats respond instantly to temperature change—not shock, vibration or anything else.



ELECTRICAL
120 VAC, 8 Amps, Resistive
100,000 Cycles
1/16" clearance through air and over surface
TEMPERATURE RANGE
60 Degrees F. to 325 Degrees F.
APPROVALS
UL File no. E36103, Guide XAPX2
CSA File No. 21048, Guide 400-E-0

SC-A/SO-A

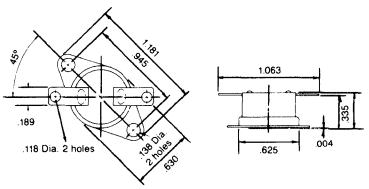
Designed for applications requiring a higher electrical rating, our newest thermostats have the same dimensions as SC and SO thermostats, except they are .12" taller, the mounting holes are .016" larger and the bracket is .187" narrower. The slightly taller thermostat puts more space between the terminals and the base, giving the A model its higher electrical rating and all International Specification Approvals.



ELECTRICAL
120 VAC, 15 Amps, Resistive
240 VAC, 8.3 Amps, Resistive
100,000 Cycles
1/4" clearance through air and over surface
TEMPERATURE RANGE
60 Degrees F. to 350 Degrees F.
APPROVALS
UL File No. MH8267, Guide MBPR2
CSA File No. 21048, Guide 400-E-0
Also has VDE and all other International Approvals

CA/OA

A breakthrough in price and technology, these thermostats perform under a wide range of operating conditions. One-piece contact construction makes the CA and OA models the most reliable in the industry. They are about the same size as the SC and SO models and are manufactured in a high-tech clean room in Japan. In fact, the CA and OA might just set a new industry standard.



ELECTRICAL

Sensor Scientific has developed a low cost interchangeable wafer thermistor product line. These highly reliable units provide a resistance temperature curve that can be matched within ±.2°C over a range of 0° to 70°C. This means that a matched replacement thermistor can be purchased several years from now with the identical R/T curve as the original thermistor.

NTC THERMISTORS

TEMPERATURE ASSEMBLIES

Sensor Scientific manufactures many different types of termistor assemblies. The housing drawings in this section are offered as a guide to assist the engineer in designing a complete thermistor assembly that meets his project needs best.

The housing material specified in most of the drawings is stainless steel. If the requirements are such that other material would be preferable, brass and aluminum are also available.

The basic element in these assemblies is the thermistor. Sensor Scientific manufactures a complete line of thermistors. The glass bead and probe thermistor and the wafer or disc type thermistor are units that are typically used in these assemblies.

Sensor Scientific has trained application engineers who will assist you in the design and selection of the thermistor assembly that meets your needs best. Our probes have been designed to maximize sensitivity and stability. They are also constructed to minimize the risk of damage due to operation and handling.

All assembly work is performed by carefully trained and supervised individuals. All units are extensively tested throughout the manufacturing process to insure that customers receive the highest quality thermistor assemblies.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

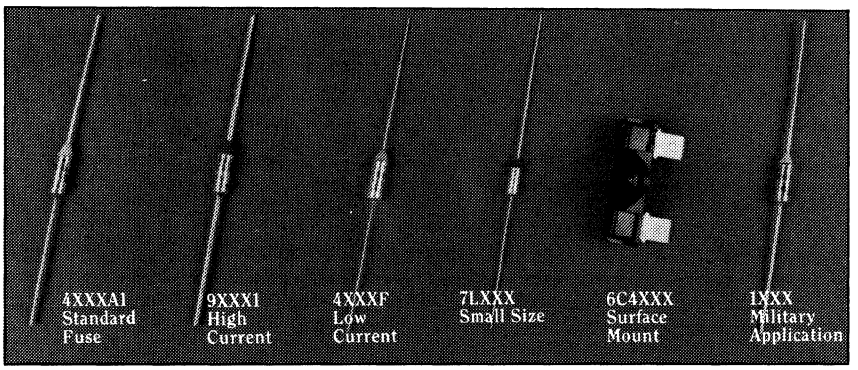
MICROTEMP® Thermal Cutoffs

MICROTEMP Thermal Cutoffs provide permanent over-temperature protection for motors, transformers, appliances, HVAC equipment and electronic equipment. Once a MICROTEMP Thermal Cutoff opens a circuit, it remains open until the fault is corrected and the fuse is replaced.



Thermal Cutoff Series Selection

To determine which series is best for your application, remember:

- To consider the normal and abnormal electrical currents and voltages of your product.
- That the current passing through a MICROTEMP Thermal Cutoff can generate I^2R, self heating. This must be considered when selecting the proper series and opening temperature for your application.
- That the outer case of the MICROTEMP Thermal Cutoff is electrically live and may require insulation. Additionally, since insulation can reduce heat transfer, it also must be considered in selecting the final opening temperature.
- That custom configurations and packages are available.
- That a thermocoupled dummy should be installed in the product circuit to determine the correct temperature setting.

MICROTEMP® Thermal Cutoff Types

Reading the temperature chart.
All MICROTEMP Thermal Cutoffs are identified by their Type No. (4XXXA1, 9XXX1, etc.). The "XXX" digits are determined by the opening temperature you specify. For example: A 4136A1 is a MICROTEMP Thermal Cutoff with an opening temperature of 60°C.

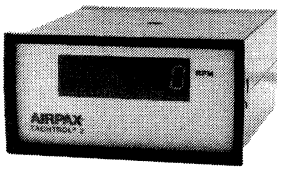
TACHOMETERS AND MAGNETIC SPEED SENSORS

For accuracy, fast response time and reliable, long-lasting performance, specify Airpax tachometers and magnetic speed sensors. Contact Airpax Company, Cheshire Industrial Park, Cheshire, CT 06410. (203) 272-0301. A division of North American Philips Corporation.

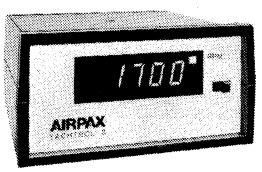


Tachtrol® 2 – Speed/Rate Monitor

A single input digital instrument, this speed/rate monitor offers fast-response, high-precision monitoring. Measured values are displayed in engineering/units: RPM, FPM, frequency or other values. Rugged, easy to set up, yet costs less than competitive models.

Features:

- Single-channel precision speed or rate monitoring.
- Period mode measuring system.
- Five-digit auto-ranging .56″ LED display; full or partial auto-ranging with leading zero suppression. Updates twice per second.
- Active or passive sensor input; accepts any pulse output device, magnetic digital speed sensor.
- Meets MIL-810C shock and vibration.

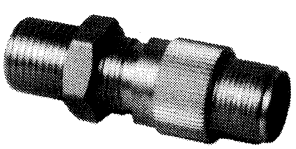


Tachtrol® 3 – Dual Input Digital Tachometer

Single or dual channel instrument, this computing tachometer measures input frequencies and displays the resulting quantities in RPM, FPM, % Draw and other rates. A unique method of setting conversion factors and instrument functions allows easy configuring or altering at any time.

Features:

- Measures speed or frequency (2 Hz to 30,000 Hz).
- Active or passive speed sensor inputs.
- Auto ranging LED display.
- Meets MIL-810C shock and vibration.



1-3111 – Low-Cost Molded Magnetic Speed Sensor

Stainless steel housing and one-piece construction, this speed sensor has interior section coated with epoxy resin to resist both oil and moisture.

Features:

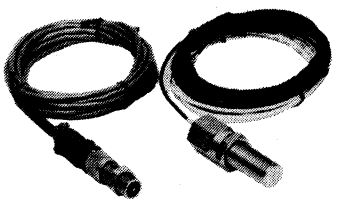
- Wide operating and storage temperature range: – 40°F to + 300°F.
- 190-volt minimum output (P-P).
- Mates with MS3106A-10SL-4S.

Tach-Pac® 3

The single channel, microcomputer-based Tach-Pak® 3 uses adaptive period averaging which permits a combination of fast response and high accuracy. It measures input frequency and converts the resulting quantities to a meter output, an analog output, and four relays. A unique method of setting instrument functions permits them to be easily configured or altered in the field at any time.

Features:

- Measures frequency from .0625 to 30,000 Hz.
- Active or passive sensor inputs: accepts input from any frequency source.
- Response time – 50 millisecond updates above 100 Hz.
- Field programmable.

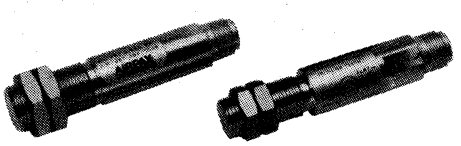


1-0001 and 1-0005 – Passive Magnetic Speed Sensors

Convert mechanical motion to AC voltage. The frequency of the AC signal is exactly proportional to the speed or RPM.

Features:

- No moving parts.
- Wide temperature range.
- Stainless steel housing.
- UL/CSA and FM listed sensors available. Intrinsically safe.



4-0070 and 4-0036 – Active Magnetic Speed Sensors/Zero Velocity

Either speed sensor can be used to sense the speed of any rotating machinery, including motors, generators, turbines, compressors, conveyors – wherever speed or RPMs need to be monitored.

Features:

- Low cost.
- 12V ± 2 VDC power supply.
- – 25°C to + 70°C operating temperature range.
- 4-0036 is UL listed.
- DC to 10K Hz frequency.
- UL/CSA listed sensors available.

DESCRIPTION

The F.W. Bell series of Hall effect magnetic field sensors consists of 29 standard models designed to meet the requirements of most magnetic field measurement applications. The sensors are small, solid-state devices. They produce a voltage which is proportional to the product of the control current and the magnetic field component normal to the Hall active area. Each unit has four electrical connections. Two carry the control current (I_C) and the other two supply the Hall voltage.

These models are built in various configurations to measure axial, transverse, and tangential magnetic field components. Their operating characteristics permit virtually any application: frequency, dc to MHz; magnetic flux density, milligauss to kilogauss; linearity to 0.1%; temperature, -269°C to +100°C.

This schematic representation illustrates both the measuring and multiplying capabilities of a Hall generator. By holding I_C constant, V_H becomes a direct function of B, the magnetic flux density. If both, I_C and B are variable, V_H is proportional to the product of the two functions. Holding B and I_C constant, V_H becomes a function of the angle between B and the plane of the Hall-generator active area.

Special units are available to fit your application.

Optical Incremental Encoders

DISC INSTRUMENTS specializes in providing modular, enclosed, and panel mounted optical incremental encoders for position and velocity sensing applications. These encoders feature an exceptionally accurate quadrature output, minimal PM error, high frequency response, minimal edge jitter and low power consumption. These characteristics, combined with long term stability, makes these encoders ideal for a wide variety of motion control loop applications.

Keyed to the high performance and low cost features of these encoders is the incorporation of DISC's integrated optoelectronic technology. The sensor array and the optoelectronic signal processing integrated circuits are mounted on a .40" square hybrid circuit. All passive components are surface mounted on our printed wiring board.

High reliability and accuracy are assured by the use of state of the art robotic equipment to perform most of the encoder assembly and the use of resistor laser trimming for its calibration. Reduced component count due to the integrated optoelectronic circuitry also greatly enhances reliability.

Standard encoders do not always meet specific design requirements. For this reason, DISC INSTRUMENTS has developed an in-house optics shop, machine shop, prototype shop, and life testing lab in order to develop encoders to meet unique applications requirements.

Panelcoder Series

Designed specifically for applications requiring manual incrementing, the Panelcoder offers the engineer a digital alternative to the analog potentiometer. It replaces both the potentiometer and the analog-to-digital convertor. Typical applications include transceivers, oscilloscopes, factory automated equipment, medical equipment, and CAD/CAM/CAE equipment. The Panelcoder employs LED light sources, an optical disc, and photodetectors.

Available in a wide selection of resolutions and several configuration options, including low current drain for battery operation, the Panelcoder is the digital solution for eliminating noise and wear problems while providing continuous rotation in either direction with no discontinuation. For further information, or if you have an unusual requirement that necessitates a special unit, contact our Sales Engineers or our factory direct.

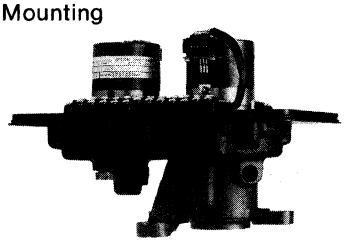
Encoder Subassembly Mounting



DISC INSTRUMENTS excels in designing unique encoders for new applications. Our Engineering Department has been designing encoders to meet tough performance requirements for over 20 years. Our computerized machine shop has the capability to fabricate the packaging of the encoder so that it fits easily into your product. Our optics shop can provide you with the disc that gives you the accuracy and precision your specifications require. Our extensive experience in optoelectronic circuit design can provide you with the feedback information your controller requires.

Even our assembly line is geared around manufacturing unique encoders. Not only can we build encoders in a large variety of sizes and shapes, we also have the ability to mount them on motors or subassemblies provided by you. In fact, for many customers we manufacture the subassemblies, as well.

The advantages of being tiny.

At Entran, we've solved most of the problems you might encounter with pressure transducers by making them tiny. And nowadays, tiny is the state-of-the-art.

Being tiny means you don't interfere with the integrity of the system being measured.

Being tiny means less measuring surface to bear loads, and a more compact solid state density with no moving parts.

Being tiny means being insensitive to acceleration, vibration and shock, so you get flat pressure readings, both static and dynamic.

And, being tiny means greater handling ease in hard-to-get-at places. Which adds up to more applications flexibility.

Entran pressure tranducers can usually be interfaced directly with scopes, recorders and milliammeters.

Our transducers come complete and ready to use. All you need supply is the excitation voltage on two leads and read output on the other two leads.

All units give you direct linear output in millivolts/psi and read both static and dynamic pressures. There's no need for charge or voltage amplifiers. Calibrations are traceable to The National Bureau of Standards.

The advantages of being tiny.

At Entran we build a line of accelerometers that can best be described as tiny.

Being tiny means you don't interfere with the integrity of the system being measured.

Being tiny gives you greater handling ease in hard-to-get-at places, which adds up to more applications flexibility. And, being tiny means less mass to distort your test scale, more room for other instruments. All at no sacrifice in test data.

Entran accelerometers give you high output, low impedance readings, both static and dynamic. As a result they can usually be interfaced directly with scopes, recorders and milliammeters.

Entran accelerometers come complete and ready to use. All you supply is the excitation voltage on two leads and read output in millivolts on the other two leads.

All units give you direct linear output in millivolts/g and read both static and dynamic acceleration. There's no need for charge or voltage amplifiers. Calibrations are traceable to The National Bureau of Standards.

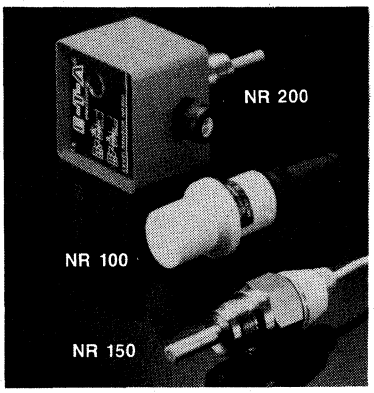
LEVEL SENSORS



Level Sensors NR 150 and NR 200 are fully electronic and have no moving parts (except the output relay in model NR 200). Model NR 100, with Teflon® sensor head is also offered for food industry applications. The devices operate on the capacitance principle. A tunable oscillator circuit is ON when the probe is immersed, keeping the output conductive (relay output NR 200, transistor output NR 150). The indicator LED is now lit. When the level drops below the sensor position, the LED will extinguish and the output relay will drop out. Transistor output of model NR 150 is now non-conductive.

FLOW MONITORS

The E-T-A range of Electronic Flow Monitoring Systems has been designed to supervise the flow rate of gases and liquids in pipelines. There are no moving parts in the flow stream, thus these systems are particularly suitable for liquids of high viscosity or containing particles in suspension. Corrosion resistant monitoring heads are also available for aggressive liquids/gases.

Typical applications for E-T-A Flow Monitors include the control of lubricating, hydraulic and cooling systems and the requirements of the petrochemical, food processing and brewing industries when flow control is often associated with the correct dosage of ingredients.

The systems operate on the calorimetric principle i.e. heat transfer between two probes is detected as a function of flow rate.

The heart of all Hamlin magnetic proximity sensors is a precious metal contact reed switch, sealed in a glass envelope for environmental integrity and dependability. When a magnetic actuator is placed within a prescribed proximity of the sensor, the switch contact changes state. Their cost is far below inductive or capacitive proximity sensors and they require no power to operate and provide a switch closure output.

For detailed product information request the Hamlin Magnetic Proximity Sensor Catalog. The 16 page brochure providescomplete data about Hamlin's broad family of standard Magnetic Proximity Sensors plus application and design recommendations. Also included are dimensions, electrical specifications and operation characteristics.

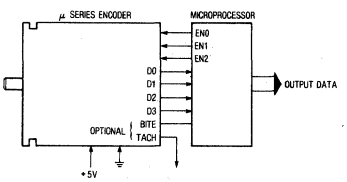
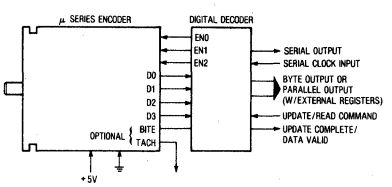
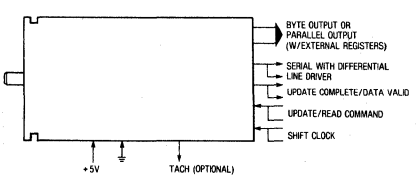
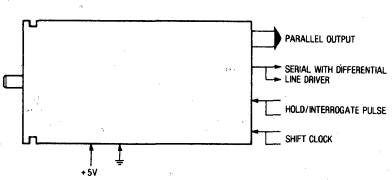
VERSATILE INTERFACE









L MODEL

The L model is the basic encoder configuration which outputs a 4 wire multiplexed, 3-State Logic Level MicroSeries Code Word. the encoder is addressed by 3 Enable Lines activated in a controlled sequence. This model is intended for direct interface with a user (or Itek) furnished microprocessor where the microprocessor can be programmed to perform the encoder's digital logic functions.

LS MODEL

The LS model consists of the basic L encoder (described above) and a separate Digital Decoder. The use of the external Digital Decoder is suggested when the user does not have a microprocessor available to perform the digital processing of the outputs of the L Model encoder or when the length of the LC encoder exceeds available space in the intended application. The external digital decoder also affords the user the flexibility to access the various input/output programming modes available with MicroSeries encoders. The Digital Decoder can be user programmed for three output modes: serial, 8 bit bytes, or parallel with strobe signals to latch user supplied external registers. Additionally, two data acquisition modes are possible: Update and Read.

LC MODEL

The LC Model contains an Integral MicroSeries Digital Decoder Chip. This model, essentially similar to the LS, is appropriate when an encoder without external processing circuits is desired. The same output and data acquisition modes as the LS Model are available but are built in at the factory for the LC Model.

K MODEL

The µS/23K Model encoders are *low cost* absolute encoders which provide 12 or 13 bits resolution with either parallel or serial output. In the parallel output mode all bits are continuously available. The HOLD pulse prevents any bit from changing state while the encoder is being read. In the serial output mode the user provides an interrogate pulse which provides the hold function and loads the shift register. Shift (clock) pulses provided by the user serially shift out the stored information.

CLASSIFICATION AND MAIN APPLICATIONS OF PIEZOTITE®

Material	Outstanding Feature	Main Application
P-3	A most broadly used material having barium titanate as a main constituent mixing other components to improve temperature characteristics around normal temperature.	For powerful ultrasonic oscillation such as cleaner, processing equipment, etc., fish finder, underwater sounding equipment, etc.
P-5	Titanate-zirconate is used as main constituent. Electromechanical transformation efficiency is great. This material resists against a high temperature of 200°C and has an excellent aging resistivity.	Powerful ultrasonic oscillation and high pressure generation such as for high-performance and high temperature cleaner or processing equipment, etc.
P-7	Like P-5, titanate-zirconate is used as a main constituent. P-7 has a greater electromechanical transformation efficiency than P-5. Especially, this material is suitable for application into nonoscillating system for its low mechanical Q.	Record player pickup, microphone, aerial ultrasonic equipment, high band resonator, etc.

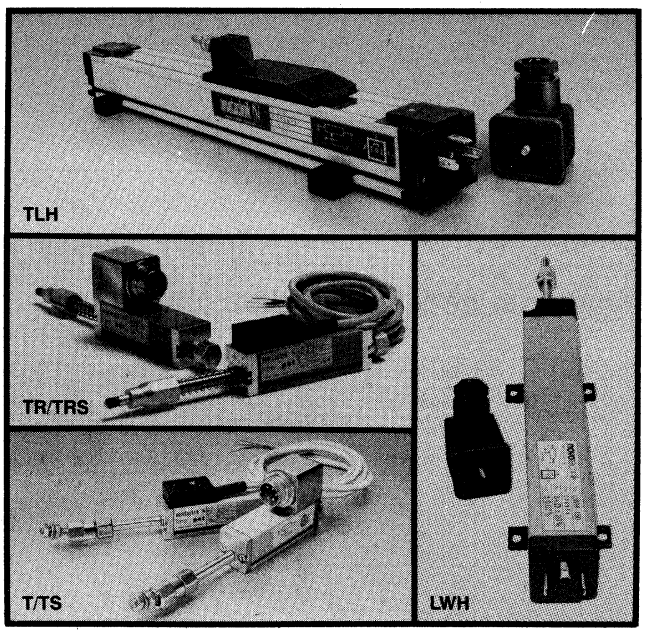
Displacement Transducers • Rotary and Rectilinear

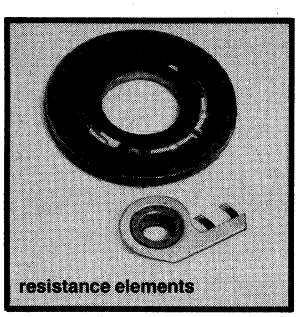
Novotechnik U.S.'s family of rotary and rectilinear displacement transducers features outstanding linearities, high tolerance to environmental extremes, and long operating lifetimes (typically 100 × 10^6 operations).

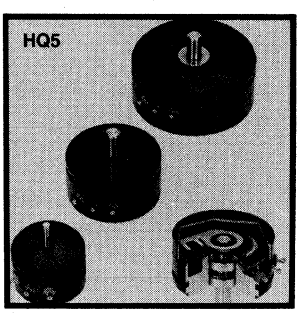
The position transducers and rotary potentiometers have conductive plastic resistance and collector tracks, and use multi-fingered elastometer-damped precious metal wipers.

The linear transducers offer a range of electrical strokes from 25mm to 3000mm, with resolution better than .01mm and linearities as low as 0.01%. Operational speeds are typically as high as 10 m/s.

The rotary potentiometers give 360° of mechanical rotation, linearities to 0.025% and resolution better than 0.01°.







Linear Position/Displacement Transducers

TLH Series Features side actuation and ball coupling to eliminate offset errors, and eighteen stroke lengths from 100–3000mm. Independent linearity is between ±.07% and ±.01%; resolution is .01mm.

LWH Series Features pivoting front bearing and range of connectors: DIN, Binder, or Amphenol. Ten stroke lengths are available from 75 to 1200mm, with independent linearity between ±.07% and ±.01% and resolution of .01mm.

TR/TRS Series Displacement transducer with stroke length of 25, 50, 75 or 100mm, return spring and double bearings. Linearities range from ±.2% to ±.15%; 3-core cable or plug-and-socket connections are available.

T/TS Series Features double precision bearings and anti-rotation mechanism for load-free operation, five stroke lengths from 25 to 150mm, and linearities from ±.2% to ±.075%. Two alternate electrical connections are available: via 3-core cable (type T) or plug-and-socket (type TS).

Resistance Elements Novotechnik U.S. offers resistance elements with stroke lengths between 25 and 3000mm and wipers for integration into a customer's system or device. Special customized versions are available.

Rotary Potentiometers

HQ5 Series Novotechnik's standard units for machinery and instrumentation. Linearities of ±.05% (servo sizes 9, 11 and 13) and ±.025% (size 20) are achieved through final stage trimming of fully assembled potentiometer. Max. operational speed 10,000 rpm; acceleration 50,000 rad/s^2.

Resistance Elements Rotary potentiometer elements are available with wipers for incorporation into customers' devices as integral potentiometers.

Special-Purpose Potentiometers Novotechnik U.S. offers rotary potentiometers for a wide spectrum of applications:

- Low Torque Potentiometers...for angular measurement without loading
- Industrialized Potentiometers...for use in harsh environments
- Sensor Potentiometers...specially developed for the automobile industry
- Geared Potentiometers...for use in harsh environments with backlash-free gearing for 3, 5 or 10 turns
- Motorized Potentiometers...self-contained units with speeds from 120°/s to 360°/s and output torque from 10Ncm to 100Ncm.

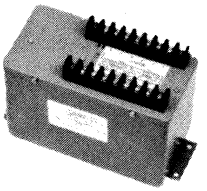
MODEL W-21



DESCRIPTION

OSI Watt Watt-Hour Transducers provide accurate measurement of electric power consumed in equipment, apparatus, or facilities. Accuracy for all conditions of phase, voltage unbalance, and current unbalance is assured through the use of one element for single phase, two elements for 3 phase 3 wire, and three elements for 3 phase 4 wire applications. The output is proportional to real power delivered to the load.

Direct connected models or models utilizing OSI Current Sensors C, D & E provide the excellent current transient response necessary where **SCR control, chopped waveforms, or any application where harmonics are present.** The DC to 5 kilohertz response of these current sensors insures accurate computation of power with high harmonic content in current waveforms.

All models include current sensors that are calibrated with the watt transducer. In this way a highly-accurate, calibrated kilowatt or megawatt measuring unit is readily available for incorporation without the necessity of worrying about the inaccuracies current transformers and potential transformers may introduce in measurements.

Standard models provide an output proportional to instantaneous power and should be used where observation of time-department power is desired.

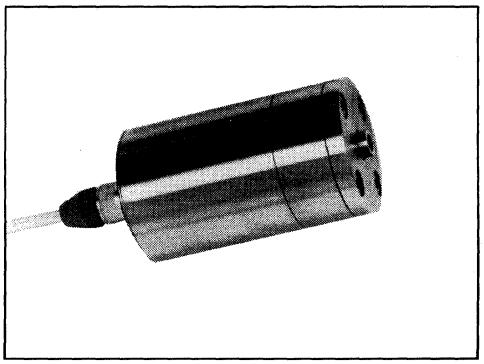
TRANSDUCERS & SYSTEMS

Specialists in transducers and systems for low range force/weight measurements

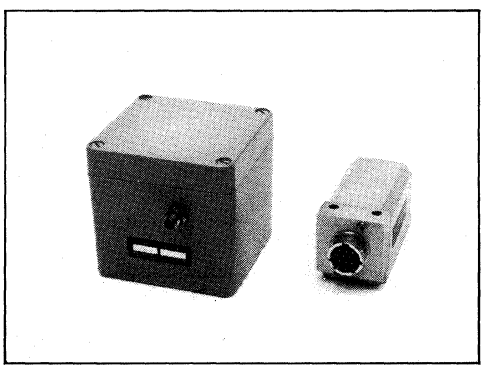
A PRIME TECHNOLOGY COMPANY



LOW RANGE FORCE/WEIGHT TRANSDUCERS

- **Highly repeatable — .02% F.R.**
- **Frictionless sensing**
- **Virtually indestructible**

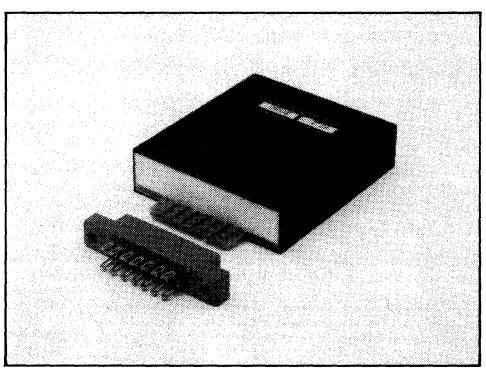
A virtually indestructible frictionless spring-loaded design has been proven in a wide range of applications — from demanding high volume arm flexture gram force calibration for disk drive manufacturers where durability and dependability are required . . . to sophisticated medical laboratory developments where pinpoint accuracy and precise repeatability are a must.



INCLINOMETERS

- **From ±5° to ±90° with 360° axial capability**
- **Resolution of 0.1 arc-second**
- **Fast response, low hysteresis, high stability, high accuracy**

The HO Series of inclinometers utilizes a frictionless assembly for measuring deviation from horizontal, with immediate response, virtually infinite resolution and no cross-axis sensitivity. It is an LVDT-based spring mass system with core material centered on a non-magnetic stainless steel shaft with two mass weights equidistant on either end. The HO-C Series is a more moderately priced alternative to the HO inclinometer that meets the performance standards of most applications.

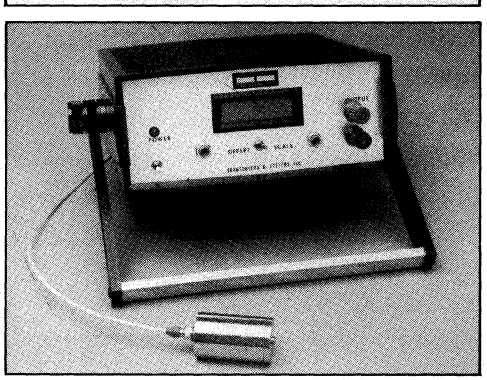


SIGNAL CONDITIONING MODULES

- **Flexible**
- **High resolution output**
- **Designed for use in existing OEM applications.**

These EL Series modules eliminate the need for developments of custom circuitry where DC to DC operation is desired. They provide a carrier-oscillator-demodulator filter and amplifier to provide a sharp, high resolution output. The unique EL2 has provision for remote offset and scale potentiometers as opposed to the more conventional EL3 with on-board adjustments.

Note: AC line, cord-operated, ±15VDC output power modules are available for use with EL2 and EL3 units.



SIGNAL CONDITIONING CONTROL BOXES

- **Zero & Span Adjustments**
- **4½ Digit Display**
- **AC Power Line Operation**

The CB14 control box is a highly flexible bench-top AC line-operated system. A 4½ digit LCD indicator and standard calibrations give a direct visual representation of measurement in grams of force or inclination related to the sine of the angle. Front panel accessible offset and scale potentiometers allow adjustment of any deviation experienced through mounting.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!
